# 74AC153 • 74ACT153 Dual 4-Input Multiplexer

#### **General Description**

The AC/ACT153 is a high-speed dual 4-input multiplexer with common select inputs and individual enable inputs for each section. It can select two lines of data from four sources. The two buffered outputs present data in the true (non-inverted) form. In addition to multiplexer operation, the AC/ACT153 can act as a function generator and generate any two functions of three variables.

#### November 1988 Revised November 1999

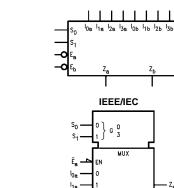

#### Features

- I<sub>CC</sub> reduced by 50%
- Outputs source/sink 24 mA
- ACT153 has TTL-compatible inputs

#### **Functional Description**

The AC/ACT153 is a dual 4-input multiplexer. It can select two bits of data from up to four sources under the control of the common Select inputs (S<sub>0</sub>, S<sub>1</sub>). The two 4-input multiplexer circuits have individual active-LOW Enables ( $\overline{E}_a, \overline{E}_b$ ) which can be used to strobe the outputs independently. When the Enables ( $\overline{E}_a, \overline{E}_b$ ) are HIGH, the corresponding outputs  $Z_a, Z_b$ ) are forced LOW. The AC/ACT153 is the logic implementation of a 2-pole, 4-position switch, where the position of the switch is determined by the logic levels supplied to the Select inputs. The logic equations for the outputs are shown below.

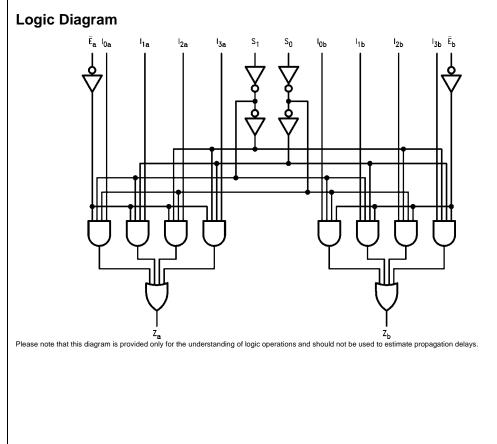

$$\begin{split} Z_a &= \overline{E}_a \bullet (I_{0a} \bullet \overline{S}_1 \bullet \overline{S}_0 + I_{1a} \bullet \overline{S}_1 \bullet S_0 + \\ I_{2a} \bullet S_1 \bullet \overline{S}_0 \overline{+} \overline{I}_{\overline{3}\overline{a}} \bullet \overline{S}_1 \overline{\bullet} \overline{S}_0 ] \\ Z_b &= \overline{E}_b \bullet (I_{0b} \bullet \overline{S}_1 \bullet \overline{S}_0 + I_{1b} \bullet \overline{S}_1 \bullet S_0 + \\ I_{2b} \bullet S_1 \bullet \overline{S}_0 \overline{+} \overline{I}_{\overline{3}\overline{b}} \overline{\bullet} \overline{S}_1 \overline{\bullet} \overline{S}_0 ] \end{split}$$

#### Note 1: Adsolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation of FACT™ circuits outside databook specifications.
