

HEAVYCON

Standard Housings Type B

1. Short description

HEAVYCON plug connectors are just as common in measurement and control engineering as in mechanical and plant engineering. They are used for both power supply and control. Another sector in which they are often to be found is in lighting and stage systems.

HEAVYCON plug connectors also act as the interface for PCs or diagnostics equipment to transfer operating data or monitoring signals during system operation.

The HEAVYCON housings are divided into:

- **Permanently installed housings**
- Box mounting base with one or two cable entries
- Panel mounting base with an aperture in the floor for control cabinet mounting
- **Free housings**
- Sleeve housing
- Coupling housing

The user can choose between a variety of different housing heights that offer sufficient connection space for large conductor cross sections.

Double width HEAVYCON housings (type B 32 and B 48) allow two contact inserts to be accommodated in one housing.

Type description

	HC	-	B	10	-	T	FL	-	45	/	M	1	ST	PG16	G
HEAVYCON															
Type	B														
No. of positions	10														
T	= Sleeve housing														
A	= Panel mounting base														
S	= Box mounting base														
K	= Coupling housing														
FL	= For single locking latch,														
FQ	= For double locking latch,														
ML	= with single locking latch,														
MQ	= with double locking latch,														
D	= with cover														
Housing height h in mm															
M	= with gland														
O	= without gland or supports														
Number of glands or screw connections															
ST	= supports														
PG	= Pg cable gland,														
M	= Metric gland														
G	= straight,														
S	= lateral														

**Type B 6,
Sleeve housings,
with Pg screw connection**
