

α-TWIN Series FUJI MCCB and ELCB

The highest priority for the molded case circuit breakers (MCCBs) and earth leakage circuit breakers (ELCBs) employed in power distribution control systems is to provide sure, safe protection for connected equipment against short-circuits or earth leakage.

Fuji Electric has led the industry with the TWIN Breakers (30 to 800AF), same-size MCCBs and ELCBs. All of these breakers meet exacting demands for quality and performance.

Now, the lineup has been further enhanced with six major concepts – international standardization, utility, technical innovation, compactness, safety, and ecology – in the new α -TWIN series.

α -TWIN Series

Compact

Safety

Ecology

Techno

Global Standardization

Technical innovation in compact breakers – Standard models that fully conform to international standards

International Standardization

Conforming to international standards

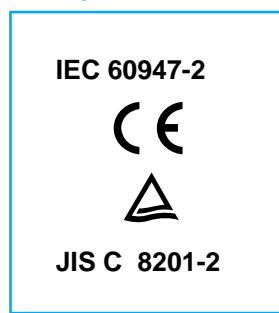

● Conforming to international standards comes as "standard equipment."

The α -TWIN series conforms to IEC and EN standards, and features UL and CSA approval.

● Worldwide standards indication on standard models

Nameplate

Optional accessories will be approved by TÜV in April 2003.

Nameplate

The α -TWIN series is **UL508** listed.
It fully complies with the disconnection requirement for U.S. applications.

File No: E216772

Note:
The S and E series MCCBs are UL508 listed.
The SG and EG series ELCBs conform to UL508 with the addition of the test items of UL1053 which stipulate the earth leakage protection function.

● Circuit breaker stipulated by IEC standards

IEC 60947-2

Low-voltage switchgear and controlgear
Part 2: Circuit breaker

Conforms to IEC isolation function items

Isolation refers to the condition in which the handle will not indicate OFF, and OFF locking will not be possible simultaneously, in the event that the breaker's main contacts weld.

Rated ultimate short-circuit breaking capacity (Icu)
Interrupting duty: O-CO at rated voltage

Rated service short-circuit breaking capacity (Ics)
Interrupting duty: O-CO-CO at rated voltage

Technical Innovation

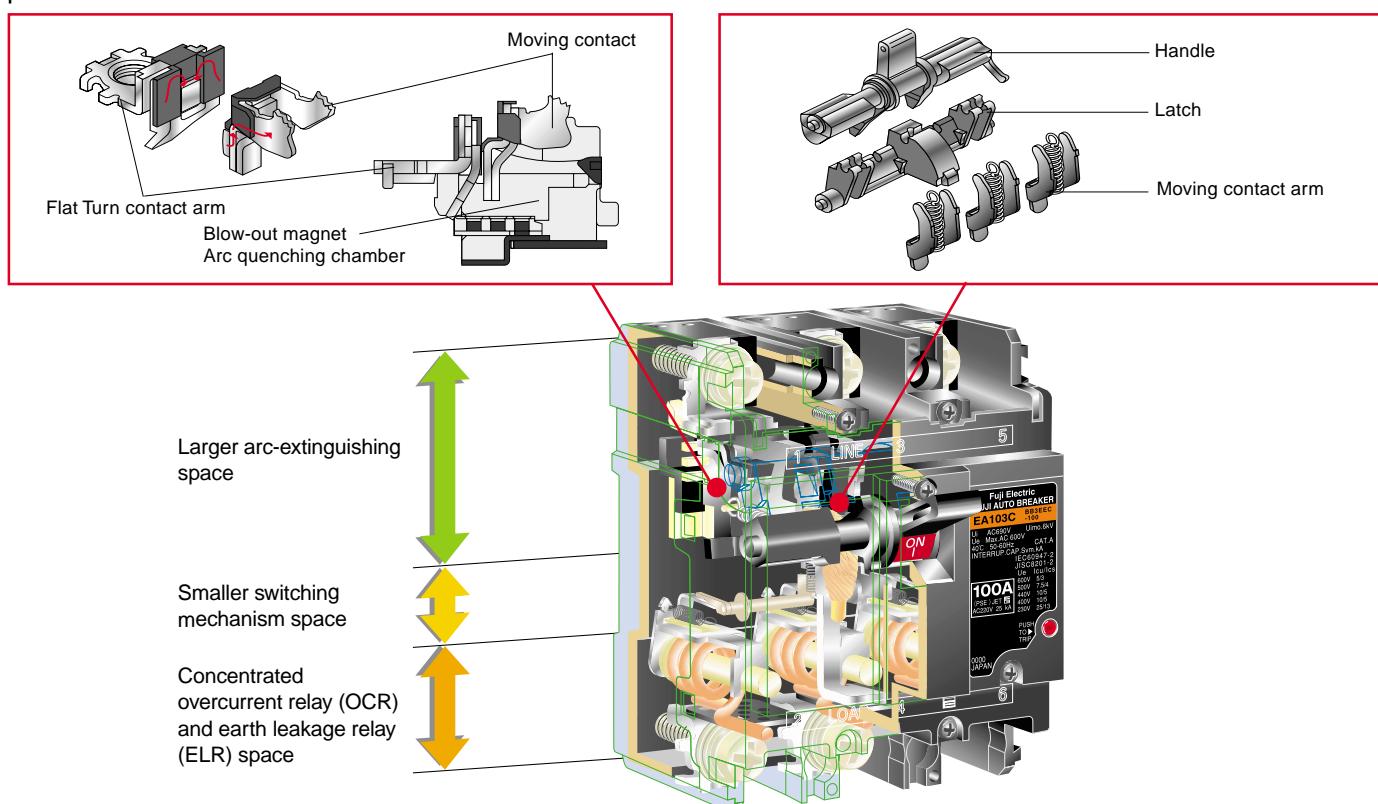

New-generation technologies increase compactness and performance.

- Unique operating mechanism and ideal, new-concept layout reduce size and raise performance in the α -TWIN series.

Flat Turn contact arm and Direct-Drive switching mechanism

Development of a new molded link method has enabled a simple and compact mechanism, and expanded the arc-extinguishing space to further improve breaker performance.

The combination of the simple Flat Turn contact arm, blowout magnet, and arc-quenching chamber provides a unique current-limiting effect.

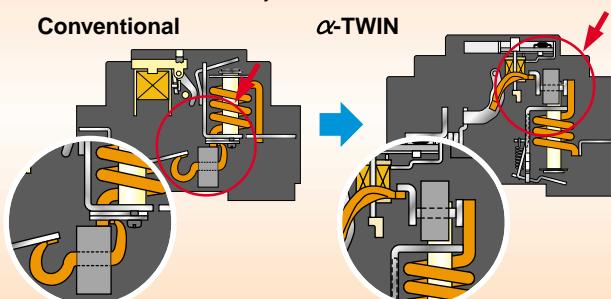

ELCB functions

A new concept led to greater compactness through a more efficient arrangement of the earth leakage

detection section, overcurrent detection section, and breaker trip mechanism.

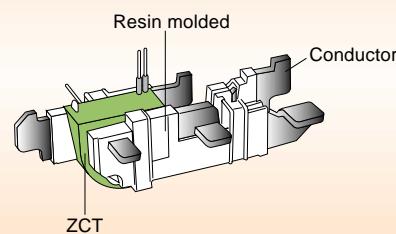

ELR unit with less wiring

A unit construction for the ELR and greater wiring efficiency has boosted connection reliability.

Solid-state insulation ZCT

Insulation has been strengthened by using resin to mold the main circuit conductor and ZCT into an integrated unit.

Compactness

Compact, modular units help to reduce panel design and manufacturing costs.

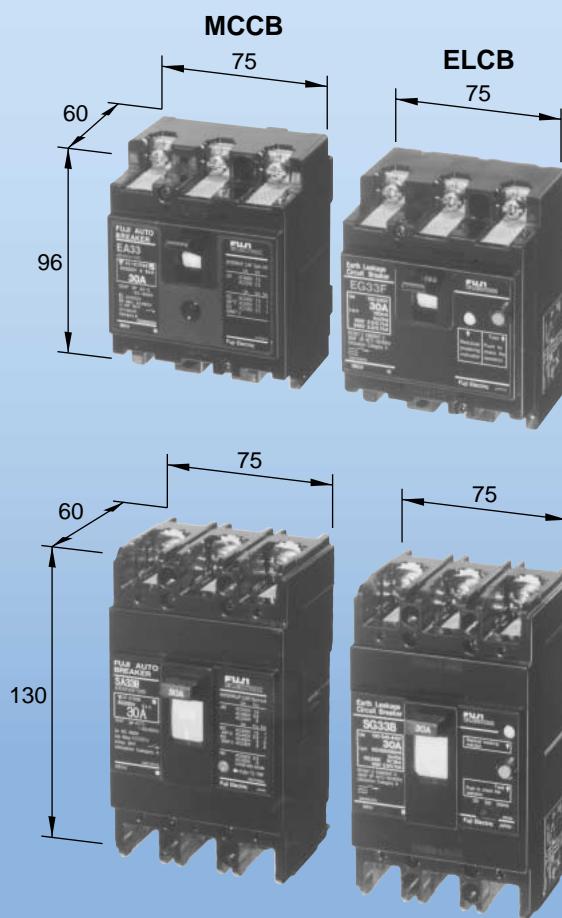

- Providing the advantages of compactness and unified, modular design for 30 to 100AF.

Both the economical 30 to 100AF E types and the standard 30 to 60AF S types have identical external dimensions, which contributes to standardization and cost reduction in panel design and manufacturing. Unification of the external dimensions enables flexible response to specification changes in the panel. Unification of the external and basic dimensions has expanded the range of models mountable on 35-mm wide rails.

Unified modular design for 30 to 100AF

Conventional TWIN breakers

NEW α-TWIN breakers

Unit: mm
Photos and dimensions for 3-pole types

Utility

Customer-mountable – Adapts quickly to on-site production needs

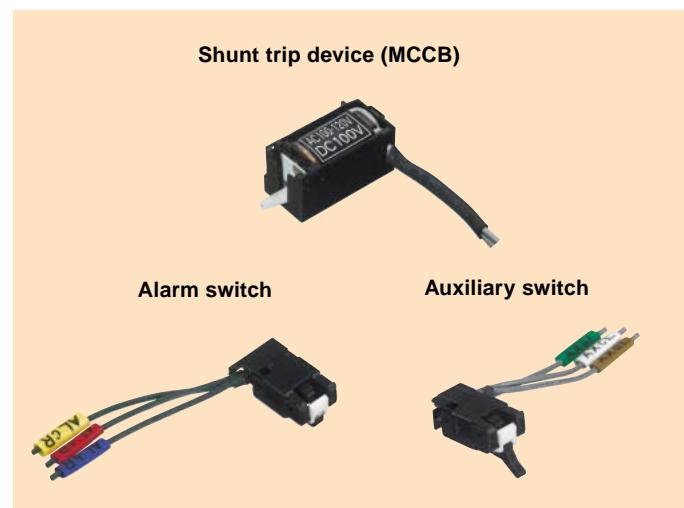

● A wider range of customer-mountable accessories

The range of cassette-type internal accessories has been greatly expanded for 30AF to 100AF MCCBs and ELCBs. This speeds up and simplifies customer response to specification changes.

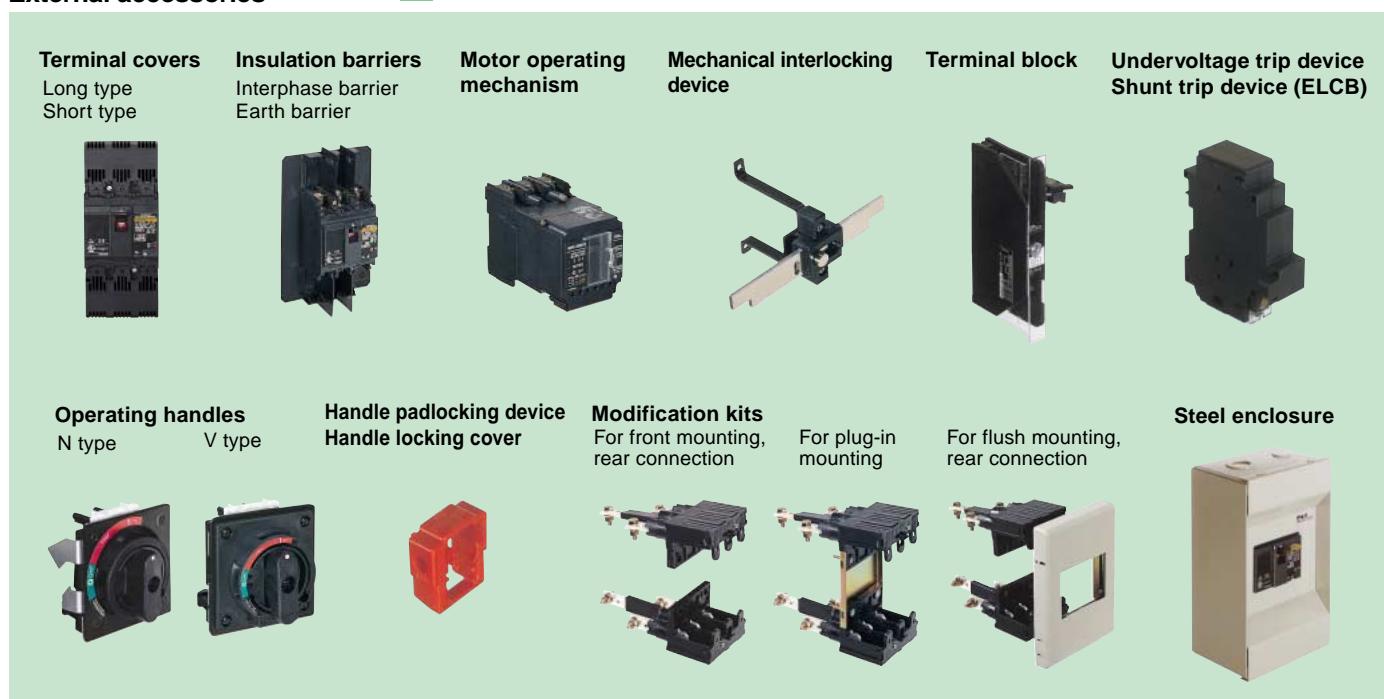

All accessories shown here can be mounted by the customer except for motor operating mechanism and plate type padlocking device.

Internal accessories

External accessories

Safety

Greater safety thanks to isolation and optional accessories

● Breakers conform to IEC isolation items.

The breaker conforms to IEC isolation items stipulating that the handle will not indicate OFF, and simultaneously, OFF locking will not be possible, in the event that the main contacts are closed. This construction satisfies the Power Circuit Breaker requirements of the EN 60204-1 basic safety standards of the EC Machinery Directive.

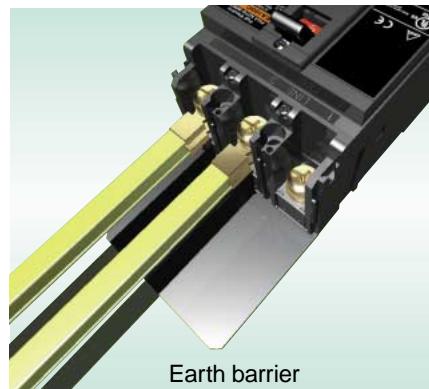

● Interphase and earth barriers

The interphase barrier reinforces the insulation between phases of the bar terminals and crimp terminals. The earth barrier increases the insulation between the crimp terminal and the mounting panel when cross-wiring (for a double connection of the crimp terminal).

Interphase barrier

Earth barrier

● Long type terminal cover conforming to IP20

The terminal cover can be mounted to provide IP20 protection stipulated in IEC 60204-1. This finger protection type of cover guards against shock from accidentally touching live terminals.

Protection as defined in the IEC (International Electrotechnical Commission) IP20 ratings (IEC 529)

IP20

Degree 2: Degree of protection against human contact or penetration by a foreign object

An enclosure that will prevent a human finger or a foreign object not exceeding 80mm in length from contacting live or moving parts.

An enclosure that will prevent penetration by a foreign object exceeding 12.5mm in diameter.

Ecology

Product development based on the key concept of ecological improvement

Thermoplastic resin

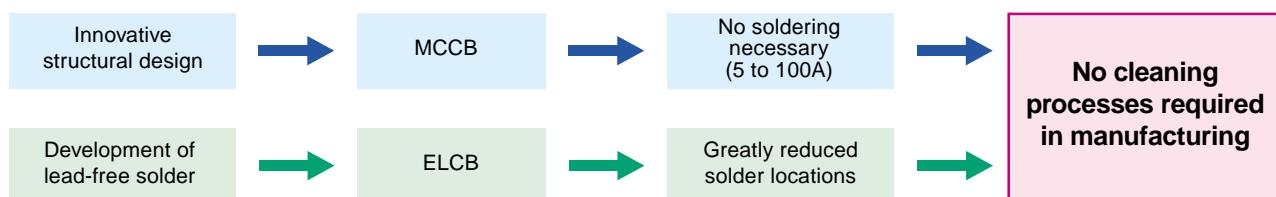

Recyclable thermoplastic resin is used for plastic parts, and the names of materials are indicated on all major

parts to facilitate their recycling.

Development and use of environment-friendly materials

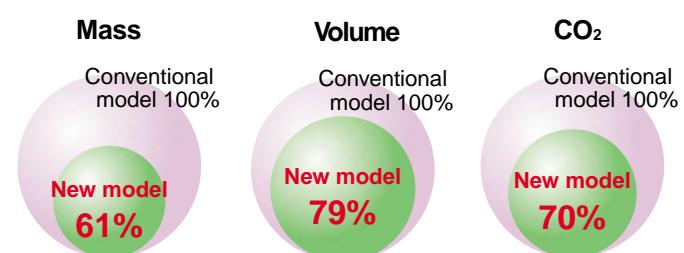

- Lead-free solder
- Cadmium-free contacts (For types of rated current 50A or less, or interrupting capacity 5kA or less at 200V AC)

Less soldering and reduced environmental burdens

Product downsizing

By making products more compact, FUJI has achieved drastic reductions in the mass and volume of the materials used. This also contributes to reducing CO₂, one of the leading causes of global warming.

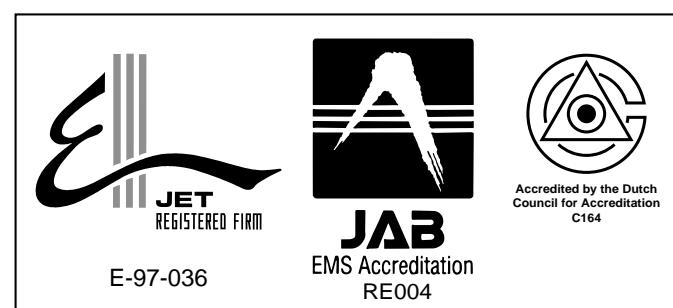

The new α-TWIN series is manufactured in ISO 9001 and ISO 14001-certified facilities.

FUJI has received ISO 9000-series certification for quality control and quality assurance, and ISO 14000-series certification for environmental management systems from ISO (International Organization for Standardization).

The Otawara Factory, which produces the new MCCBs and ELCBs, has received ISO 9001 and ISO 14001 certification.

This international certification attests to our active efforts to achieve highly reliable quality assurance systems and to build development and production systems that take full consideration of the environment.

Models and application

■ MCCB

General-purpose line protection

S-series MCCBs are applicable to equipment with a capacity of 150 to 200kVA.

E-series MCCBs are inexpensive and compact, they make it possible to design economical panels.

Instantaneous trip

These MCCBs are equipped with sole instantaneous trip elements, but do not have inverse time trip elements.

Motor protection

These MCCBs include motor overload protection and cable overcurrent protection functions.

Non-automatic

These MCCBs are not equipped with overcurrent trip elements for inverse time or instantaneous trips, and do not trip automatically.

Frame size	Rated interrupting capacity (kA) Icu/Ics		General-purpose line protection		Motor protection		Instantaneous trip		Non-automatic *

Note: * Not provided with automatic-tripping function.

■ ELCB

General-purpose line protection

S-series ELCBs are well suited to standard equipment use.

Arc welder use

ELCBs will not malfunction due to the high inrush current in the initial firing pulses of arc welders.

Motor protection

Included a motor overload protection function.

■ Optional accessories

- MCCB

- ELCB

- Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit.

- Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped.

- Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance.

- Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops. It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating.

- Terminal block (Type A)

A wiring terminal for internal accessories (Order with W, K or F)

- Megger test switch (Type MGS)

Factory-mounted

Interlocked with the main contact of the ELCB. When the handle is turned OFF, the control circuit is automatically isolated, enabling megger testing between phases on the load side.

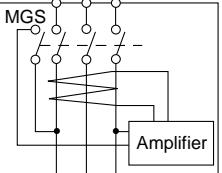

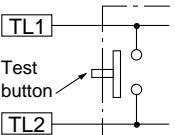

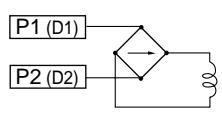

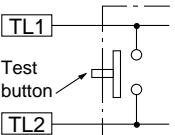

- Test lead wire (Type TL)

Factory-mounted

Trips the ELCB remotely with a contact signal.

Optional accessories

■ Terminal block for auxiliary circuit

FUJI MCCBs and ELCBs with internal accessories such as auxiliary and alarm switches, shunt trips and undervoltage trips require leadwire. FUJI MCCBs and ELCBs can also be supplied with terminal blocks suitable for additional circuits. The terminal blocks are slimmer in size.

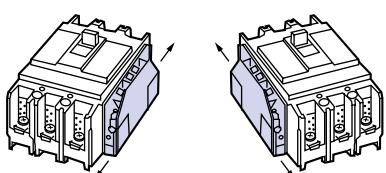

Lead wiring

The lead wires exit from the side of the installation position of the internal accessory as shown in page 32.

No additional space is required in side-by-side installation, and panel mounting space can be saved.

Each lead wire is provided with a ring mark indicating the terminal number of the accessory to be used, which minimizes incorrect wiring.

Terminal blocks are located on the right and left side of the breaker case.

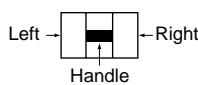

Terminal block

A terminal block for circuit breaker is constructed so that the lead wire is parallel to the side of a circuit breaker. This eliminates the space previously required for lead wire bending, and allows breakers to be installed side-by-side with terminal blocks.

■ Available configurations

3-pole

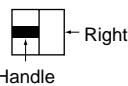

Undervoltage trip with terminal block: R

Auxiliary switch: W

Megger test switch: MGS

2-pole

Shunt trip for MCCB: F

Shunt trip for ELCB F with terminal block: F

Alarm switch: K

Test lead wire: TL

Brown	Red	Green	Blue	White	Yellow	Red	Red

■ Dimensions, mm

Terminal block

Undervoltage/Shunt trip device (ELCB)

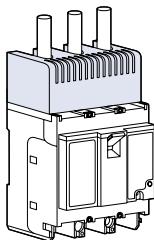

Optional accessories

■ Terminal covers

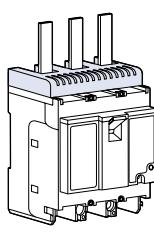

Finger protection guards against shock from accidentally touching live terminals.

The long type terminal cover can be mounted to provide IP20 protection stipulated in IEC 60204-1 (structured in combination with earth barrier).

Description	Pole	Terminal type	
		Black	Transparent
Long type	2-pole	BZ6TB10C2	BZ6TBH10C2
	3-pole EG102C	BZ6TB10C3	BZ6TBH10C3
Short type	2-pole	BZ6TS10C2	BZ6TSH10C2
	3-pole EG102C	BZ6TS10C3	BZ6TSH10C3

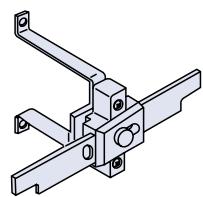

Long type

Short type

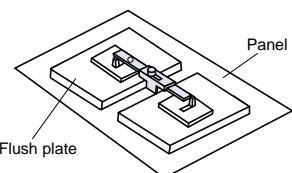

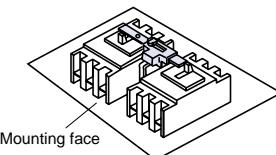

■ Mechanical interlock device

The mechanical interlock device can be mounted onto two separate breakers to maintain a mutual ON or OFF condition. The device can also be locked with a padlock.

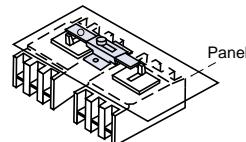

For front mounting: **BZ6M1**

For flush mounting: **BZ6M2**

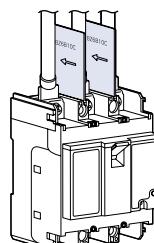

For front mounting, rear connection, plug-in mounting: **BZ6M3**

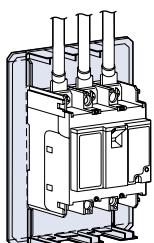

■ Insulation barriers

The interphase barrier reinforces the insulation between terminals, while the earth barrier increases the insulation between the terminal and the mounting panel.

Description	Pole	Barrier type	Remarks
Interface barrier	3-pole	BZ6B10C	Standard provided:
Earth barrier	2-pole	BZ6BL10C2	50 to 100AF
	3-pole EG102C	BZ6BL10C3	2-pole: 1-interface type 3-pole: 2-interface type

Interface barrier

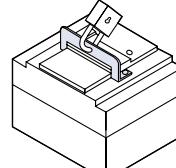

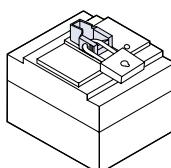

Earth barrier

■ Handle padlocking device

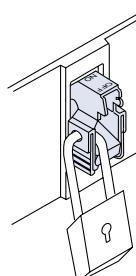

This key lock device snaps on to enable the handle to be locked in either the ON or OFF position. It can be used either as a handle locking cover or, with the addition of a padlock, as an ON or OFF lock. Even when locked in the ON position, the breaker will trip when overcurrent flows to it.

Cap type Q1: Factory-mounted

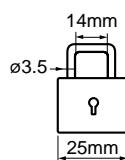

Plate type Q2: Factory-mounted

Handle locking cover: **BZ6L10C**

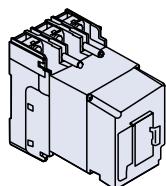

Padlock/Not supplied

■ Motor-operating mechanism

A new drive structure in the motor operating mechanism speeds up drive operation to drastically reduce ON/OFF switching time from 2s to 0.1s.

Operating Voltage	Code (50 to 100AF)
100V AC	M1
110V AC	M2
200V AC	M4
220V AC	M5
48V DC	MN
100V AC	MK

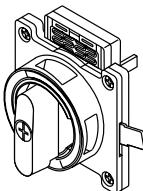

Optional accessories Mounting modification kits

■ External operating handles

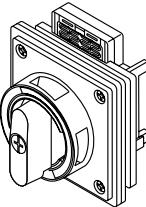

There are two handles available in the series: the V type handle on panel mount and the N type handle on breaker mount. An extension shaft (sold separately) for the V type handle allows the distance between the handle and the breaker to be adjusted.

The protective structure of the handle operation section conforms to IP54. Both handle types can be locked with a padlock conforming to IEC 60204-1. The panel cutout dimensions are the same for both handles.

N type: **BZ6N10C**

V type: **BZ6V10C**

■ Steel enclosures

Enclosures are available in three types—two with V-type handle which allows the operation from the outside, and other direct operating.

Description	Pole	Enclosure type	
		Up to 60AF	100AF
Standard (Direct operating)	2-pole 3-pole EG102C	BZ6C10C2 BZ6C10C3	BZ6C25C2 BZ6C25C3
Dustproof handle-operated	2-pole 3-pole	BZ6CV10C	BZ6CV25C
Rainproof handle-operated	2-pole 3-pole	BZ6CW10C	BZ6CW25C

Standard
(AF90-780)

Dustproof
(AF96-175)

Rainproof
(CP97-2636)

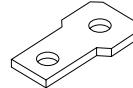

■ Mounting modification kits

By mounting the rear connection terminal unit, the customer can easily change the breaker from a front mounting front connection configuration to a front mounting rear connection configuration. Optional kits also allow the customer to easily switch to a plug in front mounting or flush mounting rear connection.

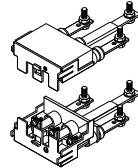

Description	Pole	Kit type	
		30 to 50AF	60 to 100AF
For front connection	2-pole	BZ6S10C502	BZ6S10C1002
Flat terminal/ S	3-pole	BZ6S10C503	BZ6S10C1003
Front mounting, rear connection/ X	2-pole	BZ6X10C502	BZ6X10C1002
	3-pole	BZ6X10C503	BZ6X10C1003
Flush mounting, rear connection/ E	2-pole	BZ6E10C502	BZ6E10C1002
	3-pole	BZ6E10C503	BZ6E10C1003
Flush mounting, top & bottom connection/ Y	2-pole	BZ6Y10C502	BZ6Y10C1002
	3-pole	BZ6Y10C503	BZ6Y10C1003
Plug-in mounting/ P	2-pole	BZ6P10C502	BZ6P10C1002
	3-pole	BZ6P10C503	BZ6P10C1003

Note: X, E, Y and P type kits for EG102C are factory mounted.

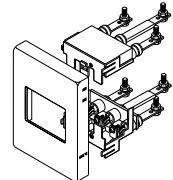

Kits for front connection,
Flat terminal/ S

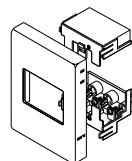

Kits for front mounting,
rear connection/ X

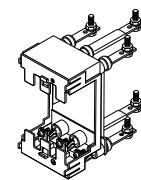

Kits for flush mounting,
rear connection/ E

Kits for flush mounting,
top & bottom connection/ Y

Kits for plug-in mounting/ P

Operating conditions

■ Standard operating conditions

MCCBs and ELCBs are manufactured based on the standard operating conditions given in the table below. Countermeasures will be required if they are to be used in environmental conditions that differ from those of the standard operating conditions. FUJI manufactures special MCCB and ELCB models to match specific operating conditions. Contact your FUJI sales representative for details.

Standard operating conditions

Ambient temperature	-10°C to 40°C	No sudden temperature changes resulting in condensation or icing.
Relative humidity	85% RH or less	
Altitude	2000m or lower	
Atmosphere	No excessive dust, smoke, corrosive gases, flammable gases, steam, or salt.	

■ Factors effecting operating characteristics

• Ambient temperature

If an MCCB and an ELCB are used at a temperature other than the reference ambient temperature (specified as 40°C by JIS) at which its overcurrent trip characteristics are prescribed, the long-time delay trip characteristic changes.

Therefore, the choice of MCCB and ELCB must consider to the catalogued temperature correction curve and overcurrent trip characteristics.

Hydraulic-magnetic trip device:

The minimum for trip current does not change, but changes in the ambient temperature increase or decrease the operating time because the viscosity of the silicon fluid in the oil dash pot changes.

• Mounting angle

MCCBs and ELCBs are designed to be mounted in parallel with the vertical plane. Note that mounting in other than the standard position could alter operating characteristics of the MCCB and ELCB.

The effects of mounting angle on the overcurrent trip characteristic vary according to the type of trip device.

Hydraulic-magnetic trip device:

The effect of gravity on the iron core in the cylinder varies with the mounting angle; therefore, mounting angle affects the operating characteristics. In general, backward or forward tilt not exceeding 10° from the vertical has negligible effect, but angle greater than this require correction of the current rating according to the correction factor listed table below.

Current rating correction for mounting angle

Vertical	Horizontal	Horizontal (upside down)	
 100%	 85%	 115%	
<hr/>			
Slant Forward 15°	Forward 45°	Backward 15°	
 95%	 90%	 105%	 110%

⚠ Safety Considerations

- For safe operation, before using the product read the instruction manual or that comes with the product carefully or consult the Fuji sales representative from which you purchased the product.
- Some of the products listed in this catalog may have limits on their use or location or may require periodic inspections. Call Fuji's sales representative for further information.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.
