MicroSmart Pentra

Micro-controllers play an increasingly central role in today's industrial applications. You have many controllers to choose from, but the one you turn to most often is the one that fits best, physically and practically. You'll find IDEC PLCs in various applications from water treatment plants to HVAC to printing press operations and more. They're always dependable, easy to program and almost as smart as you are.

IDEC brought some of the first micro-PLCs to the market, and has been meeting your changing control automation needs for decades. Now with the MicroSmart Pentra, you get the fastest and most full featured programmable logic controller there is.

International Approvals

All MicroSmart controllers have regulatory agency certifications for the worldwide market including being cULus Listed for Class1 Division 2 Hazardous Locations, TUV approved, CE, and certified for marine use by ABS and Lloyd's Registry.

Write & Run Your Programs Now

Relax. Programming the MicroSmart is fast and straightforward. Use IDEC's WindLDR software to configure, modify and monitor your MicroSmart programs with ease. This powerful and intuitive software makes it simple to get your system up and running.

Rugged, Compact, Modular Design

Every CPU module comes equipped with embedded I/O points, and you can conveniently add snap-on expansion modules for up to 512 I/Os based on your system requirements. All MicroSmart controllers are DIN-rail or panel mountable.

Upgrade Without Downtime

For added convenience, the same expansion I/O modules and accessories can be used on both the MicroSmart and MicroSmart Pentra controllers. In fact, both controllers share the same architecture, instruction set and programming software. The use of a single software platform for all IDEC PLCs means you won't have to reprogram or learn a new system to move from one to another.

MicroSmart Pentra Performance

The Fastest Micro Controller in its Class!

MicroSmart Pentra is the fastest micro controller available in its class. The overall processing speed of the new Logic Engine CPU is 16 times faster than our competitor's average controller.

Supports 32-bit data and floating point math

MicroSmart Pentra supports double-word, floating point math operations, capturing and storing large values, and returning computed results accurate to seven decimal places.

Field Upgradeable Firmware

Extend the life of your PLC! Upgrade your firmware on-site as new functions and versions become available.

Built-in Modbus RTU/ASCII master & slave, and Modbus TCP (1:1) de-facto protocol

Modbus messaging protocol is a de-facto protocol in industrial networking. Communication with other devices on a Modbus network can be easily achieved with built-in Macros instructions.

MicroSmart Pentra Performance

Maximum 7 Communication Ports

MicroSmart Pentra models can accommodate up to a total of seven communication ports. Now you can connect your HMI, PC, barcode reader, RFID equipment, printer and more.

Integrated 100KHz Fast Inputs and Outputs

Configure up to four high-speed inputs from high-speed output devices such as rotary encoders or proximity switches at a maximum frequency of 100KHz, independent of the scan time. Up to three high-speed outputs can be used for simple positioning controls for stepper or servo motors.

56 PID Loops

PID is the standard solution to many industrial process controls because of its accuracy and stability. With up to 56 PID loops and advanced auto-tuning features, your systems can be tuned to optimum values for the desired control response.

Maximum 56 Analog I/O

Your options include 0-10V, 4-20mA, RTD, thermocouple, thermistor inputs and +/-10V output. With built-in Macro instructions, configuring analog parameters is just a step away.

Features:

- Available in 10, 16, 20, 24, and 40 I/O CPUs.
- PID Controls
 - Program up to 14 PID loops
- High Speed I/O
 - Built-in 4 high speed inputs
 - Single or Dual Phase
 - Max. 20KHz frequency
- Built-in 2 High speed outputs (Slim model only)
- Configure up to 264 I/O Points
- Data link up to 32 MicroSmart and Pentra CPUs
- Using RS485 communication module/port, you can create a network of up to 32 CPUs.
- Worldwide Approvals
 - cULus listed, CE marked
 - Class 1 Div. 2 for hazardous locations
 - Lloyds Registered and ABS approved for shipping industry

Remote Maintenance

- Easily monitor machine conditions, change machine configurations, or upload and download user programs from anywhere, using IDEC WindLDR software over an Ethernet network.
- For a more graphical display and remote data archiving, OPC servers, such as IDEC WindSRV or standard SCADA software, can be used.
- Save time and money:
 - Access system parameters from your desk, conference room or home to check machine status without walking the factory floor.
 - If a machine is down, you no longer need to send someone with their laptop to debug or download a new user program.

Web Server Functions

- Machine status can be monitored and controlled from any PC using standard internet browsers, such as Internet Explorer.
- A built-in custom template, which allows you to monitor and change system parameters, is included.
- Get more flexibility and control by creating your own custom webpage.

Alarm Messaging

Real-time updates of error status or process conditions can be sent to an email address or cellular phone.

- A maximum of 32 customizable messages can be pre-defined with up to two email addresses each.

O/I Connectivity

- Using the IDEC Web Server Module on an Ethernet network, an IDEC PLC can be configured as a host to an IDEC operator interface. This allows the touchscreen and PLC to be in separate locations.
- No longer hassle with specialized cables and serial connection limitations.

AS-Interface Master Module

Appearance	Part Number	Description
	FC4A-AS62M	MicroSmart AS-Interface Master Module

The Actuator Sensor-interface (AS-Interface) is the simplest and most cost-effective of the PLC-based, industrial-networking protocols. AS-Interface is a truly open, low-cost electromechanical connection system designed to operate over a two-wire cable carrying data and power over a distance of up to 100m. It is especially suitable for lower levels of plant automation where simple - often binary (On/Off) - field devices such as switches, sensors, and actuators need to interoperate in a local area automation network controlled by a PLC. IDEC supports this open technology.

IDEC offers a plug-in AS-Interface master module (as well as other AS-Interface devices, please see AS-Interface Communication section) that is easy to configure; it can also connect up to 62 slaves. With this technology, you'll reduce the amount of engineering needed, simplify wiring and enhance your operations; requiring less maintenance. With an average cost of savings of 15 to 40% compared with traditional cabling methods, using an IDEC AS-Interface module is the easy choice.

Master-Slave Principle

The AS-Interface master controls and monitors the status of slave devices connected to the AS-Interface bus. Normally, the AS-Interface master is connected to a PLC (sometimes called 'host') or a gateway.

Various types of slave devices can be connected to the AS-Interface bus, including sensors, actuators, and remote I/O devices. Analog slaves can also be connected to process analog data. Slaves are available in standard slaves and A/B slaves. Standard slaves have an address of 1 through 31 in the standard address

range. A/B slaves have an address of 1A through 31A in the standard address range or 1B through 31B in the expanded address range. Among the A/B slaves, slaves with an address of

1A through 31A are called A slaves, and slaves with an address of 1B through 31B are called B slaves. (see AS-Interface Communication section for more details)

AS-Interface Module can't

High Reliability and Security

The AS-Interface employs a transfer process of high reliability and high security. The master monitors the AS-Interface power supply voltage and data transmitted on the line, and detects slave failures and data errors. Even when a slave is replaced or a new slave is added during operation, the master can continue uninterrupted communication with other active slaves on the bus.

MicroSmart AS-Interface Master Module — The Right Choice

- Compliant with AS-Interface Ver. 2.1 specifications
- Digital and analog slaves can be connected.
- Configuration and slave monitoring can be done using the LED indicators and pushbuttons on the front panel as well as using WindLDR software.
- Maximum of 2 AS-Interface master modules can be used in the MicroSmart Pentra system.

AS-Interface Bus Topology and Maximum Length

The AS-Interface bus topology is flexible, and you can wire the bus freely according to your requirements. Bus length can be 100m at the maximum.

AS-Interface — The Perfect Solution

- Cost Effective
- Reliable and Safe
- Real-time capable
- Easy to install
- Easy to expand
- Safe against interference
- No limit to the bus structure
- Star, Line or Tree structure can be constructed
- Up to 100m, extendable up to 300m using repeaters

FC5A-SIF2 RS232C Communication Module

Appearance	Part Number	Description
	FC5A-SIF2	RS232C Communication Module for MicroSmart Pentra

Communicate with up to seven different serial devices

Only IDEC offers communication modules that enable you to configure up to seven serial devices! Now you can connect your operator interface, PC, barcode reader, RFID equipment, printer and more. Just imagine the possibilities.

Using the MicroSmart Pentra slim CPU, you can configure up to seven communication ports. Using the All-in-one MicroSmart Pentra you can communicate with up to five serial devices.

WindLDR
Programming Software

Unique ladder logic programming tool
designed to program all IDEC PLCs

Part Number

Part Number	Description
FC9Y-LP2CDW	WindLDR PLC programming software

Single Platform for all IDEC PLCs

WindLDR is an excellent, long-term investment for your control solutions. It programs every IDEC PLC including the OpenNet Controller, MicroSmart and the fastest micro-controller on the market, MicroSmart Pentra. It's adaptable to whatever hardware you need today and down the road.

Simple-to-use Editors

Use the tag editor to access and edit coil data. Edit comments and rung comments. Simulation mode tests your program in WindLDR to guarantee that it works the way you expected, before downloading it to your PLC.

User-friendly Interfaces

Icon-based toolbars and drag-and-drop functionality make basic ladder programming accessible to anyone. But WindLDR also shows you how to display parameters and settings and how to input your parameters, and the built-in shortcuts and tutorials will keep you on the right track.

Free Lifetime Upgrade

Not only is WindLDR the easiest and most convenient ladder programming software on the market, it also comes with a very special price with no strings attached. Our software comes with a free-lifetime upgrade. That means that you no longer need to spend thousands of dollars for software that has to be renewed every year costing you additional money. Save yourself money by using an IDEC PLC and WindLDR programming software.

For more information, see the Automation Software section.

HMI Module (Optional)

Part Number	FC4A-PH1
Power Voltage	5V DC (supplied from the CPU module)
Weight	20g

Memory Cartridge Specifications (Optional)

Part Number	FC4A-PM32	FC4A-PM64
Memory	EEPROM	
Accessible Memory Capacity	32 KB	64 KB
Hardware for Storing Data	CPU Module	
Software for Storing Data	WindLDR	
Quantity of Stored Programs	One user program can be stored on one memory cartridge	

Clock Cartridge (Optional)

Part Number	FC4A-PT1
Accuracy	±30 sec/month (typical) at 25°C
Backup Duration	Approx. 30 days (typical) at 25°C after backup battery fully charged
Battery	Lithium secondary battery
Charging Time	Approx. 10 hours for charging from 0% to 90% of full charge
Replaceability	N/A

General Specifications

Rated Power Voltage	24V DC
Allowable Voltage Range	20.4 to 26.4V DC
Current Draw	70 mA
Allowable Momentary Power Interruption	10 ms maximum
Dielectric Strength	500V AC, 1 minute
Insulation Resistance	10 MΩ minimum (500V DC megger)
Noise Resistance	DC power terminal: 1.0 kV, 50 ns to 1 μs Ethernet cable: 0.5 kV, 50 ns to 1 μs (coupling clamp)
Inrush Current	4A maximum
Operating Temperature	0 to 55°C
Storage Temperature	−40 to +70°C (no freezing)
Relative Humidity	10 to 95% (no condensation)
Pollution Degree	2 (IEC 60664-1)
Corrosion Immunity	Free from corrosive gases
Degree of Protection	IP20 (IEC60529)
Vibration Resistance	When mounted on a DIN rail: 5 to 9 Hz amplitude 3.5 mm 9 to 150 Hz acceleration 9.8 m/s ² (1G) 2 hours in each of 3 axes
Shock Resistance	147 m/s ² (15G), 11 ms duration 3 shocks each in 3 axes
Weight (approx.)	150g

Interface Specifications

Communication	RS232C <=> Ethernet conversion function
Ethernet Specifications	Electrical characteristics: Complies with IEEE802.3 Transmission speed: 10BASE-T/100BASE-TX (Not CE compliant) Communication protocol: IP/ICMP/ARP Ethernet protocol: TCP/SMTP/HTTP/Telnet No. of TCP connections: 1
Serial Interface Specifications	Electrical characteristics: EIA RS232C Transmission speed: 9600 to 115200 bps Synchronization: Asynchronous Communication protocol: Full duplex Transmission control: RTS/CTS, XON/OFF, None
Connection Method	Ethernet interface: RJ45 Serial interface: Mini DIN 8-pin connector Cable Part No.: FC4A-KC3C
Major Functions	Remote maintenance: Uploading, downloading and monitoring using WindLDR via Ethernet Web server: Configure the web server unit using Internet Explorer etc. Reading and writing PLC operands using Java applet. Web file area: 512 KB Compliant browser: Internet Explorer 6.0 or higher, Netscape Navigator 7.2 Ethernet user communication: User communication using Ethernet Message transmission: Registered outgoing message 32 message types, 63 characters maximum per message, 2 email addresses, 64 address characters maximum
Optional	Utility CD: Configuration file, PLC operand monitor sample programs, sample program configuration instructions, instruction manual (English/German/Spanish/Japanese/Chinese)
