Saia-Burgess Group

The human requirement for comfort and safety is central in driving technological progress.
Our activities are inspired by this:

Smart solutions for comfort and safety.

Profile

Who

We are a successful international group focussing on expanding segments of the automotive, industrial and building automation markets. As a supplier, our core competency is the development of innovative solutions which integrate electronic and electromechanical technologies.

What

We want to be a leading supplier in our target market segments. Our global brand stands for innovation, reliability and value. Respecting ethical principles, we create sustained added value for all of our interest groups – employees, customers, shareholders.

How

Together with our customers we develop solutions which increase comfort, safety and economy. We manufacture switches, sensors, motors, solenoids, electronic controllers and subsystems in Europe, America and Asia. Our products are supplied and supported through our extensive international sales and tech-centre organisation.

Market led structure

Automotive Division

Supplies mechanical and electromechanical components in large volumes worldwide (switches, motors, solenoids, sensors) together with subsystems as innovative solutions for clearly defined applications in the comfort and safety areas of automotive design.

Industry Division

Supplies OEM customers worldwide with a broad product range comprising electromechanical and electronic components and subsystems. These cover increased demands for comfort and safety features, mainly in domestic appliances, heating, ventilation and air-conditioning applications, and in the general industrial sector.

Controls Division

Supplies customers in Europe with control technology based on programmable logic controllers for use mainly in the areas of infrastructure automation processing control.

Innovative Products

Our research and development is focused totally on market need and customer requirements. Substantial investment is made in the development not only of innovative, new products, but also of customised solutions. Our products are manufactured, according to type and technical requirements, on either highly automated, partially automated or manual production equipment. Supplies customers in Europe with control technology based on programmable logic controllers for use mainly in the areas of infrastructure automation processing control.

Specifications

Housing	Glass fibre reinforced nylon
Plunger	Nylon
Mechanism	Snap-action, single pole
Functions	Change-over. Normally open. Normally closed
Contacts	Fixed. Moving – Ag or Gold plate on Ag
Terminals	2.0 mm (0.08 in) faston and solder – brass, gold flashed
Temperature range °C	-40°C to +85°C
Mechanical life	10 ⁷ cycles minimum (impact free actuation)
Protection	IP 40 (enclosure)
Mounting	Side mounting
Actuators	Plain lever; simulated roller (cam follower) lever
Accessories	Lug mounting frame, insulating sheet, spring-leaf actuator

F6

Snap-action Microswitches

Ultraminiature

F6

Characteristics

- small size
- sealed (IP6K7)
- PCB mounting

Rating 12–30 VDC, 5–300 mA

Dimensions (mm) 14.7 × 9 × 5.4

Actuator

- plunger
- plain lever

Approvals

- none

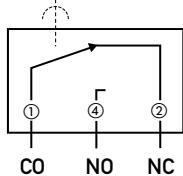

Preferred Range

Ordering Reference	Actuating Force (N)	Sealing	Operating pos. (mm)	Terminal	Circuit	Actuator	Contacts	Electrical rating
F6T85	1.6	IP6K7	10.8	PCB	CO	Plunger	Gold plated	30 VDC, 300 mA

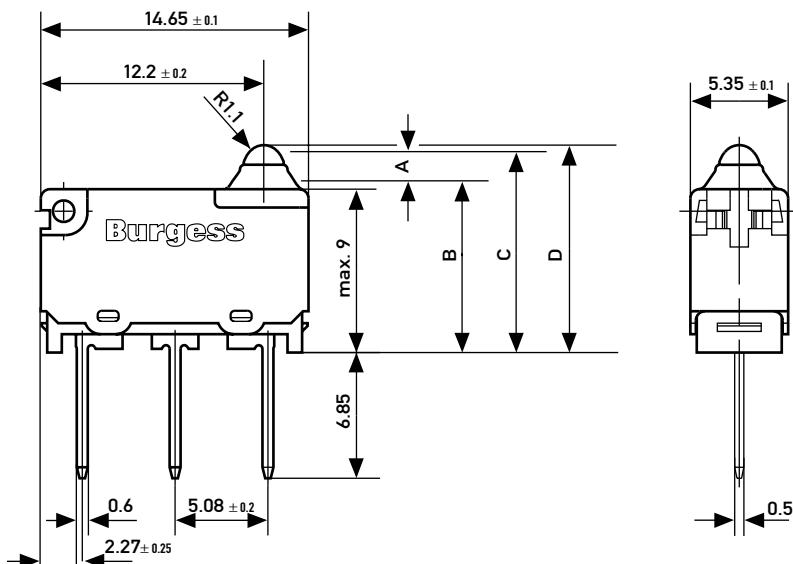

Specifications

Base	PBT
Lid	PP GF30
Plunger	POM
Mechanism	Leaf spring
Contacts	Gold plated on silver
Terminals	CuZn silver plated
Temperature range °C	-40°C up to +90°C
Mechanical life	Up to 1 mio. cycles
Protection	IP67
Actuators	Plain plunger, lever, cam follower
Cowl	TPE

Circuit diagram

FK4

Snap-action Microswitches

Ultraminiature

FK4

Characteristics

- double break switching
- long mechanical and electrical life
- solder, 2 mm faston and PCB mounting
- snap-action

Rating 250 VAC, 5 A

Dimensions (mm) 18 × 8 × 5

Actuator

- plunger
- plain lever
- simulated roller lever/cam follower

Approvals UL and CSA

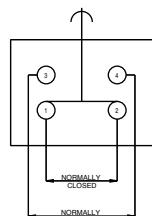

Preferred Range

Ordering Reference	Actuating Force (N)	Sealing	Operating pos. (mm)	Terminal	Circuit	Actuator	Contacts	Electrical rating

Specifications

Housing	Glass fibre reinforced nylon
Plunger	Nylon
Mechanism	Double pole, single throw snap-action coil spring mechanism with stainless steel springs
Functions	Change-over, NO, NC
Contacts	Silver
Terminals	Solder, PCB - brass, gold flashed
Temperature range °C	-40°C to +85°C
Mechanical life	10 ⁷ cycles minimum (impact free actuation)
Protection	IP40 (enclosure)
Mounting	Side mounting or PCB mounting (T8 only)
Actuators	Plain lever, simulated roller lever/cam follower
Accessory	Insulating sheet

Circuit diagram

Dimensions

Recommended maximum electrical ratings

Voltage (max)	Load (A)	Approval
250 VAC	5 (0.75 pf)	UL 1054/CSA 22.2 No. 55 - 6,000 operations

Specifications

Housing	Melamine-Formaldehyd, Thermosetting
Plunger	POM for T85, PBT for T125, PPS for T150
Mechanism	Snap-action system with stainless steel tension spring
Functions	Change-over, NO, NC
Contacts	Fine silver (Ag) or 10 µm Gold (Au), microprofile
Terminals	Solder, faston and various PCB terminals (side of housing or side of lid, as well as 1/10" o lin pitch)
Temperature range °C	Between -40°C and +85°C (special version up to 140°C)
Mechanical life	up to 5-10 ⁷ cycles (sinusoidal actuation)
Protection	Enclosure IP40
Mounting	Side mounting through mounting holes
Actuators	Stainless steel, PA66-GF35
Contact Carrier	CuZn or CuSn

X4

Snap-action Microswitches

Subminiature

X4

- Characteristics
- thermoplastic housing
 - long mechanical and electrical life
 - solder, PCB and faston terminals

Rating 250 VAC, 12 A max.

Dimensions (mm) 19.9 × 9.7 × 6.4

- Actuator
- plunger
 - plain levers
 - cam follower lever
 - roller levers

Approvals UL, cUL, CSA, ENEC, CQC

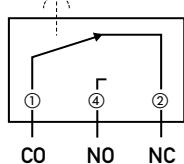

Preferred Range

Specifications

Housing	Thermoplastic
Plunger	Thermoplastic
Mechanism	Snap-action system with stainless steel tension spring
Functions	Change-over, NO, NC,
Contacts	Fine silver (Ag), or 10 µm Gold (Au), micoprofile
Terminals	Solder, faston, PCB, side-facing PCB and 'PCB terminals with 0.1" pitch
Temperature range °C	Between -40°C and +85°C
Mechanical life	10 ⁶ cycles minimum
Protection	Enclosure – IP 40
Mounting	Side mounting or PCB
Actuators	Stainless steel, PA66-GF35
Contact carrier	CuZn or CuSn

Specifications

Housing	Glass fibre reinforced Polyamide (PA 6.6)
Plunger	Polyacetal POM/(PA 4.6)
Mechanism	Snap-action coil spring mechanism with stainless steel spring
Functions	Change-over, normally closed or normally open
Contacts	Fine Silver, Gold plate on silver, Gold alloy on silver palladium (crosspoint)
Terminals	Gold flashed
Temperature range °C	-40°C to +85°C/120°C
Mechanical life	5 × 10 ⁶ cycles minimum (impact free actuation) for the cowl 3 × 10 ⁶
Protection	IP40, IP6K7 (depend on type). Flux-proof terminal entries (for all types)
Mounting	Side mounting (moulded mounting pegs on request)
Actuators	Plain lever, cam follower, roller lever, simulated roller (cam follower) lever
Accessories	Lug mounting frame, clip-on terminals cover, insulating sheet

V4L

Snap-action Microswitches

Subminiature

V4L

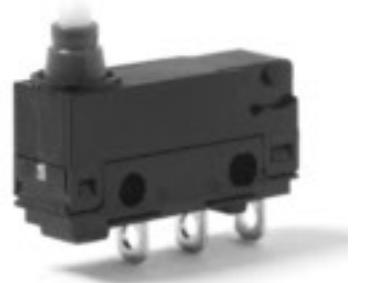

- Characteristics
- long overtravel of 2.2 mm minimum
 - sealed to (IP6K7) option
 - pre-wired option
 - solder terminals

Rating 250 VAC, 5 A

Dimensions (mm) 20 × 11 × 6.4

- Actuator
- plunger
 - plain lever
 - ice break lever

Approvals ENEC, UL, CSA

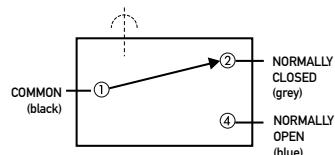

Preferred Range

Ordering Reference	Actuating Force (N)	Sealing	Operating pos. (mm)	Terminal	Circuit	Actuator	Contacts	Electrical rating

Specifications

Housing	Glass fibre reinforced polyamide (PA 6.6)
Plunger	Polyacetal (POM)
Mechanism	Snap-action coil spring mechanism with stainless steel spring. Change-over, normally closed or normally open
Contact carrier	Brass. Moving contact beryllium-copper
Contacts	Fine silver or gold crosspoint
Terminals	V4L – solder tags V4LS – PVC covered leads 0.5 m long
Temperature range °C	-40°C to +85°C
Mechanical life	V4L 2×10^6 cycles/min., V4LS 2×10^5 cycles/min. (impact free actuation)
Protection	V4L series IP40, V4LS series IP6K7, with encapsulated terminals
Mounting	Side mounting to a flat surface
Actuators	Plain lever, Ice break lever
Cowl	Silicon elastomer

Specifications

Housing	Melamine-Formaldehyd. Thermosetting
Plunger	POM for T85, PBT for T125, PPS for T150
Mechanism	Snap-action, single pole beryllium bronze blade mechanism with wiping contacts
Functions	Change-over, normally-closed (except XGG and XGK) or normally-open
Contacts	Fine silver (Ag), silver nickel (AgNi10), gold-plated (Au), silver cadmium oxide (AgCdO)
Terminals	Solder, faston, screw, PCB and side mounting PCB terminals. RAST 5 terminals (5.0 mm pitch)
Temperature range °C	-40°C to +150°C
Mechanical life	2.5 · 10 ⁵ cycles minimum, 50 · 10 ⁶ cycles maximum (Actuation: sinusoidal and maximum up to 80% of the overtravel)
Protection	Enclosure IP40
Mounting	Side mounting via mounting holes
Actuators	Stainless steel

Specifications

Housing	Glass-filled flame retardant Nylon 6.6
Plunger	Glass-filled flame retardant Nylon 6.6
Mechanism	Snap action, single pole leaf spring mechanism
Functions	Change over, Normally open, Normally closed
Contacts	Silver
Terminals	Solder, Faston and Rast 5 terminals
Temperature range	-10°C to +85°C
Mechanical life	10 ⁷ cycles minimum (impact-free actuation)
Protection	IP40 (enclosure)
Mounting	Side mounting
Actuators	Plunger, plain lever, roller lever

X3

Snap-action Microswitches

Miniature

X3

Characteristics

- 8 mm creepage and clearance distance to the actuator
- long mechanical and electrical life
- solder, faston and PCB terminal

Rating 250 VAC, 21 A max.

Dimensions (mm) 27.8 × 15.9 × 10.3

Actuator

- plunger
- straight lever
- simulated roller levers
- roller levers

Approvals UL, cUL, CSA, ENEC, CQC

Specifications

Housing	Flame retardant glass-filled nylon
Plunger	Flame retardant glass-filled nylon
Mechanism	Snap-action, single pole - beryllium copper trident spring
Functions	Change-over, Normally open, Normally closed
Contacts	Fixed - Silver cadmium oxide or gold plate on silver cadmium oxide, Moving - Silver or gold plate on silver
Terminals	6.3 mm (0.25 in), 4.8 mm (0.19 in) faston: NC (2), NO (4) - Brass, Common (1) - Brass, silver-plated Solder: Brass, silver-plated
Temperature range °C	-40°C to +85°C
Mechanical life	10 ⁶ to 10 ⁷ cycles minimum (impact free actuation) - dependent on operating force
Protection	IP 40 (enclosure)
Mounting	Side mounting
Actuators	Plain plunger, Ramp plunger

M9 / C9

Snap-action

Metal housed

M9 / C9

Characteristics

- sealed (IP67)
- internal earth (ground) screw provided
- trident spring mechanism for precise movements
- hazardous area option (Atex)

Rating 250 VAC, 15 A max.

Dimensions (mm) 76.7 × 45.8 × 26

Actuator

- spring plunger
- adjustable roller lever
- wobble stick

Approvals UL, CSA, ATEX

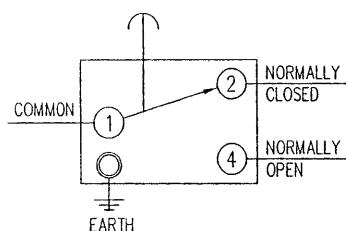

Preferred Range

		(ozf)	(in)	(in)	(in)	(in)					
Spring Plunger	DS1UL	13.3	48.00	10.5	0.41	6	0.23	14.5	0.58	3.2	0.14

Overtravel: Plunger can be depressed flush with housing. The housing should not be used as an end stop.

Spring Plunger	DS3UL	13.3	48.00	10.5	0.41	6	0.23	14.5	0.58	3.2	0.14

Overtravel: Plunger can be depressed flush with housing. The housing should not be used as an end stop.

For the convenience of maintenance engineers who must have full working conditions with the door open, DS units are fitted with a lock-on device which overrides the interlock while working. When the door is open, the plunger can be moved down and out to an extended position which will cause the switches to operate. At the conclusion of the maintenance work, full interlock facilities are restored automatically when the door is closed.

Specifications

Housing	Polycarbonate
Plunger	Mild steel, bright nickel plate
Mechanism	Single pole, double break, positive action
Functions	Normally closed
Contacts	Fixed – silver, Moving – silver cadmium oxide
Terminals	6/32 screws and clamps
Temperature range	-10°C to +85°C
Mechanical life	10 ⁶ cycles minimum, impact-free actuation
Protection	IP40 (enclosure)
Mounting	Side mounting
Actuators	Plain plunger - mild steel, bright nickel plate, roller plungers - mild steel, bright nickel plate, stainless steel roller
Approvals	UL and CSA

Terminology: Snap-action switches

ADDITIONAL TECHNICAL INFORMATION

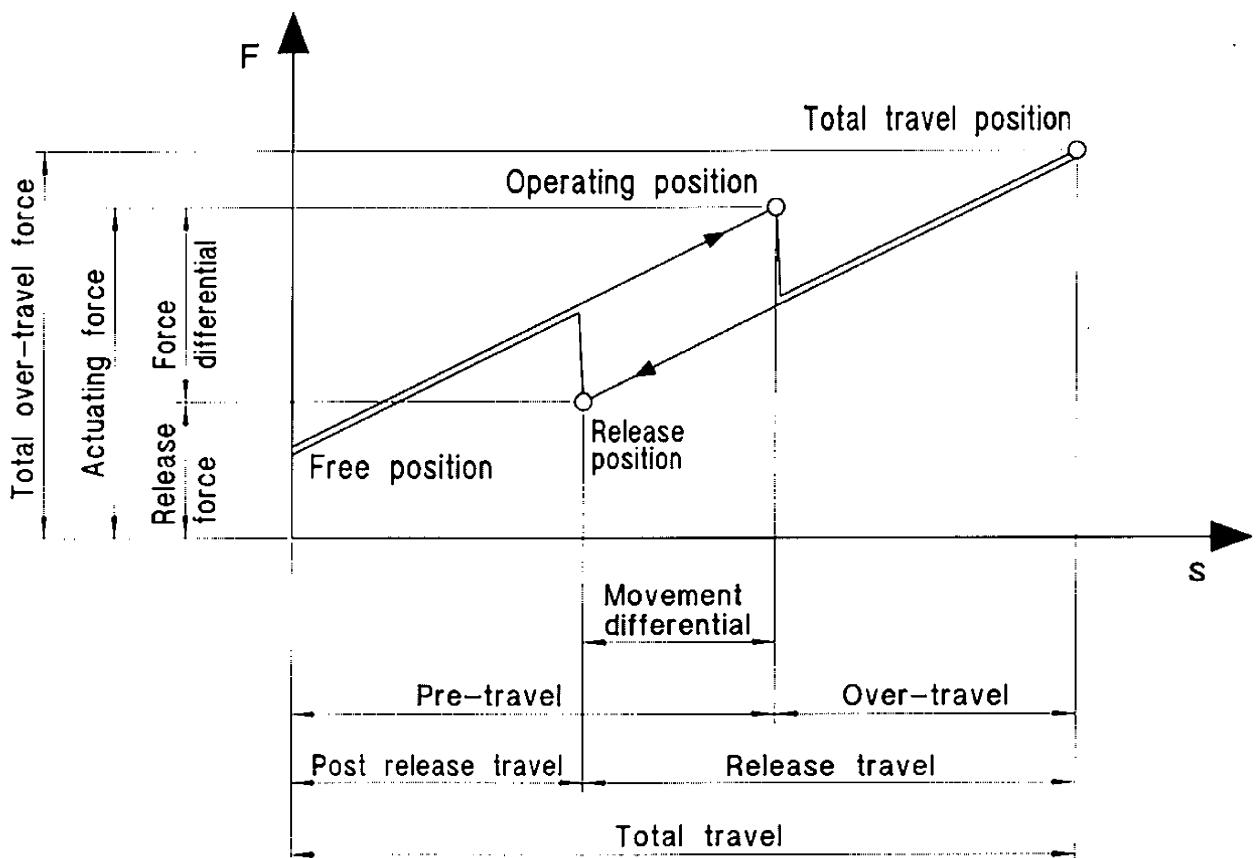

Contact Resistance

The contact resistance is the electrical resistance measured at the terminals of the switch when the contacts are closed. The resistance specifications refer to unwired switches in new condition.

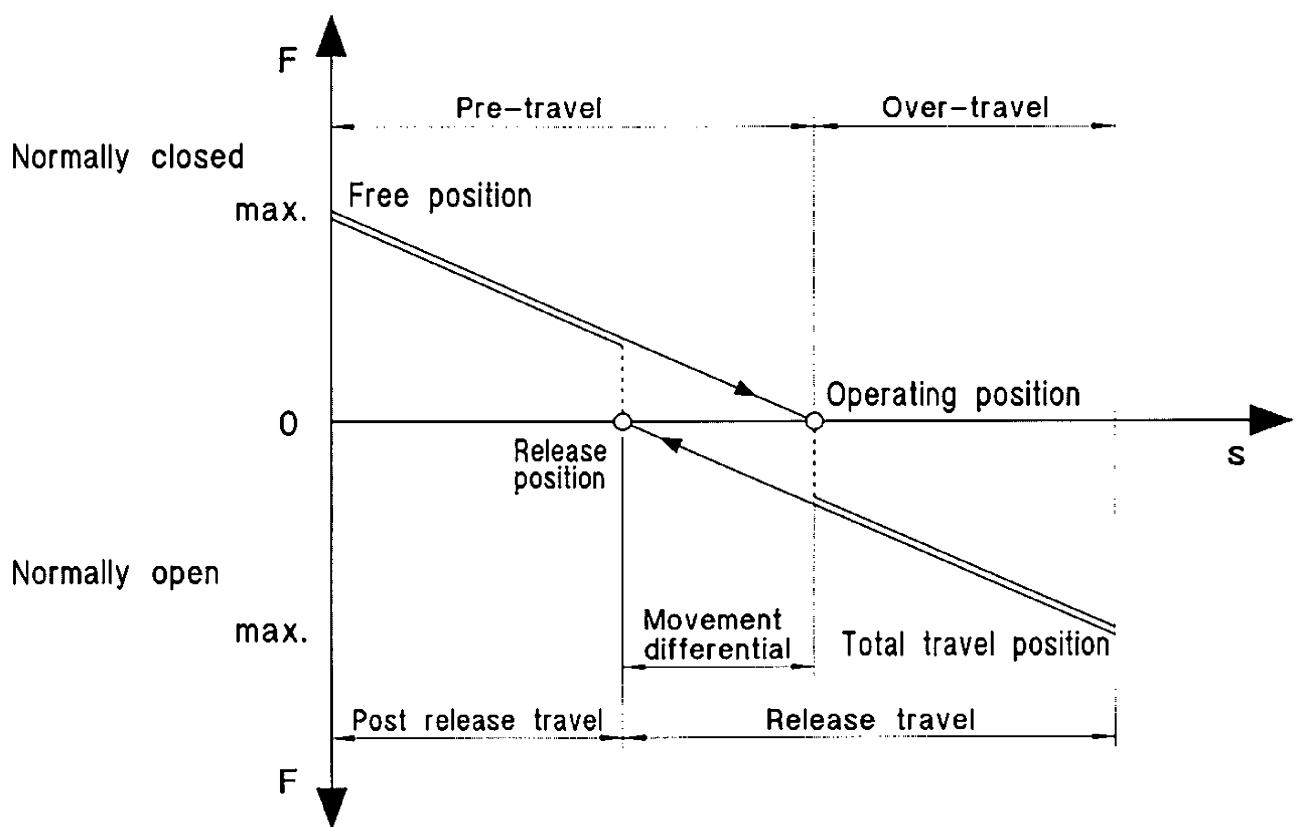

Positions – forces – movements

Free position	Position of the actuator, without any influence from an external force.
Operating position	Position of the actuator when contact changeover takes place.
Total travel position	Position of the actuator at the end of the allowed travel.
Release position	Position of the actuator when the switch mechanism resets.
Actuating force	The force required to move the actuator from the free position to the operating position.
Release force	The value to which the applied force must be reduced to allow the mechanism to reset after operation.
Force differential	Difference between actuating force and release force.
Pre-travel	Movement of the switch actuator between free and operating position.
Over-travel	Movement of the switch actuator beyond the operating position.
Total travel	The sum of pre-travel and over-travel.
Movement differential	Distance between operating position and release position.
Release travel	Movement of the switch actuator between release and total travel position.
Post release travel	Movement of the switch actuator between release and free position.

Actuating force – movement – diagram

Contact force – movement – diagram

Switch Technology

Clearance Distance—the distance in air between current carrying parts of opposite polarity or between any current carrying part and an earthed-(grounded) metal plate to which the switch is attached.

Creepage Distance – the path along the surface of insulating material between current carrying parts of opposite polarity or between any current carrying part and an earthed (grounded) metal plate to which the switch is attached.

Insulation Resistance – resistance as measured between the normally closed terminals, or between all terminals connected together and a metal plate to which the switch is mounted. In dry conditions the value would be expected to be greater than $5M\Omega$.

Single Throw – a switch which provides an ON-OFF or OFF-ON function but does not change over from one conductor to another. Such switches are usually referred to as being «normally-closed only» or «normally-open only».

Switching Cycle – one complete switching operating from free position into overtravel and back through release position to free position.

Switch Resistance – a total resistance offered by a switch in a circuit, as measured from terminal through mating contacts, to terminal.

Transit Time – the time taken by the moving contact in a snap-action mechanism to move from one stable position to another.

Electrical Ratings

Electrical ratings given in the catalogue are ratings according to UL1054, CSA22.55 or IEC61058-1.

Where these are not available, a general rating is given based upon in-house laboratory testing.

The ratings tables should be considered as safe working maximums for most applications. However, switch performance is influenced by a variety of factors, including:

- Frequency of operation
- Type of load
- Amount of travel used
- Temperature
- Humidity

Please do not hesitate to contact Saia-Burgess about your specific application.

Approvals

CSA mark. Switch meets CSA's safety standards

UL Recognized Component Mark for Canada and the United States

ENEC Mark. Switch fulfills European EN standards. The two digit number indicates which certification body has issued the ENEC Certificate

CQC Approval (China) is available for certain switches

Switch Life

a. **Electrical Life** – the electrical life data contained in this catalogue is based on laboratory controlled tests. In practice, frequency and speed of operation, type of load, suppression, actuator travel used, ambient humidity and temperature and other environmental conditions can have a major effect on switch life.

Individual assessments for specific applications are possible and can be undertaken by Saia-Burgess on request.

Please ask Saia-Burgess if you would like an assessment for your specific application.

b. **Mechanical Life** – the figures quoted relate to the number of switching cycles made without an electrical load.

Switch Drawings

All drawings in this catalogue are third angle projection.

All dimensions in this catalogue are nominal, except where specifically shown.

Application Technology

Shock and Vibration

If switches are likely to be subjected to shock or vibration, select models with the highest available actuating force.

Saia-Burgess switches feature low mass mechanisms which are inherently resistant to shock and vibration.

If possible, the switches should be mounted so that the line of acceleration is at right angles to the travel of the plunger. The maximum available overtravel should be used.

Direct Current

Direct current (DC) ratings where shown should not be exceeded if destructive arcing and contact welding are to be avoided.

Some form of arc suppression is recommended when switches are used in DC circuits containing inductive devices wired in series with the switch and the supply.

Lamp Loads

Because of the very high inrush currents associated with incandescent lamps, applications should be subject to individual assessment.

Capacitive Loads (including fluorescent lamps)

These can generate very high peak currents which can cause contact welding. Applications should be subject to individual assessment.

Inductive Loads

The general ratings tables included in this catalogue provide data for switches used to control inductive circuits at a power factor of 0.5 (EN 0.6; UL 0,7 means HP-Rating 0,5).

Contact Materials

Silver and silver alloys are the primary contact materials used in Saia-Burgess switches.

The ratings tables shown refer to switches with silver/silver alloy contacts.

Gold contacts should be specified when switches are to be used in low voltage control or logic circuits, especially when long periods of inactivity are expected or when atmospheres with a high sulphur content may be encountered.

Gold contacts are generally available in two forms; gold plated silver alloy contacts, which can also be used at higher currents or gold alloy cross-point contacts, which are only suitable for switching low currents.

Please ask Saia-Burgess if you would like an assessment for your specific application.

Switch Actuation

Direct Operation

Actuating plungers should be operated in the direction of their axis. Where this is not possible the use of actuating levers is recommended. For direct actuation the attack angle should not exceed 30°.

Actuating Levers

Various lever types are available for use with Saia-Burgess switches. They are generally stainless steel.

If roller or cam-follower levers are approached in the reverse direction, care must be taken to ensure that the angle of approach is small enough not to jam the lever.

Actuation by Cams

Cam-follower levers are particularly well suited for use with plastic actuating cams.

Abrupt actuation or release of switch actuators shortens the life of the switches.

For this reason cam should preferably provide a continuous movement. Ideally they should be of cycloidal form.

Environmental Protection

Protection Classifications

The protection classes of Saia-Burgess switches are in accordance with IEC 529 and are covered by just four codes.

IP40

Adequate protection against solids such as probing fingers and small wires >1mm. Liquids however can gain access and, unless externally protected, the switches should be mounted in dry or well-sheltered positions.

IP5K4

Good protection against solid foreign bodies, including dust and water splashing against the enclosure from any direction.

Switches may be used out of doors if sheltered from the worst of the elements or on factory machines subjected to normal washing down procedures.

IP65

Complete protection against solids, including dust, and against low pressure jets of water from all directions.

IP6K7

Complete protection against solids including dust and against immersion in water at a specific pressure for a specified time.

We reserve this code for switches which are factory sealed and tested.

Switches should not be immersed in any liquid.

*International IK code indicates protection against mechanical impact regarding to EN 50102.

Working Temperatures

For details of the working temperatures applicable to individual types, refer to the appropriate specification sheet. Special versions suitable for temperatures outside these ranges may be possible. Please contact us for information.

All quoted temperatures assume stable operation. They do not imply an ability to withstand excessive cycling within the range.

Health & Safety

Saia-Burgess has ensured, so far as it is reasonably practicable, that their products are as described in this catalogue or in other current company publications, or as specified on Saia-Burgess installation drawings. They have been so designed and constructed as to be safe and without risk to health when installed by suitably qualified personnel in accordance with relevant legislation, codes of practice, regulations (including IEE Wiring Regulations), the installation recommendations offered by the company and the accepted rules of the art. Their usage should be confined within the ratings limitations and parameters of-application indicated in this catalogue and elsewhere.

Please contact us should you need additional information or guidance.

Service Recommendations

Maintenance

Saia-Burgess switches are not user-maintainable but they should be kept in a reasonably clean, paint-free condition, especially in the actuator area. Regular checks should be made on mounting security and on the actuating medium to switch actuator relationship.

Lubrication or the use of aqueous or chemical cleaning fluids is not recommended.

Installation Recommendations

The following notes are intended merely to stress the most important and general aspects of good switch installation procedure and to provide some helpful additional information.

Safety Consideration

Installation should only be carried out by competent personnel.

Switch Positioning and Operation

Pre-loading of the switch actuator must be avoided. The actuating medium must be able to operate the switch through the operating position into overtravel and then to retract far enough to allow the switch to regain its free position.

Saia-Burgess recommends that the actuating medium should drive the switch into at least 50% of the available overtravel.

All ratings tables shown in this catalogue are based on the use of all the available overtravel.

Mounting

Side mounting switches should be mounted on smooth, firm, flat surfaces using the recommended screw size. Avoid over tightening the screws. For added security, they should be locked using epoxy resin. Do not attempt to enlarge switch mounting holes and avoid over stressing the switch. Use insulating material between the switch and metallic plates to increase clearance on switches with open terminals.

Connections

When soldering, overheating of the switch insulation must be avoided. In certain circumstances, it may be advisable to use a heat shunt. For optimum mechanical strength, the conductor should be wrapped round the tip of the terminal taking care to avoid loose strands of wire.

The soldering iron tip should be applied to the end of the terminal while simultaneously applying solder. Remove the iron as soon as the solder has wetted the conductor and terminal end. A-soldering iron tip temperature of 350°C (260°C/5 seconds for PCB Terminals) applied for a maximum of 2-3 seconds should be adequate.

For lead-free solder, is usually needed an iron tip temperature 15% higher.

Installation Recommendations (EN 61058-1)

Recommended maximum electrical ratings

Voltage VAC	Resistive load (A)	Motor load (A)
250	1	1

The breaking capacities in the tables refer to silver contacts. Gold-plated contacts are intended for use in signal circuits where the energy being switched is at the milliwatt level. Power being switched must be limited in order to avoid overheating and possible dispersal of the gold from the contact area.

Terminology: Manual operated switches

Definitions of different switch types

Rocker switch

Switch, the actuating member of which is a low profile lever (rocker) which has to be tilted to one or more indexed positions in order to achieve a change in contact state.

Push-button switch

Switch, the actuating member of which is a button which has to be pushed in order to achieve a change in contact state.

Rotary switch

Switch, the actuating member of which is a shaft or a spindle which has to be rotated to one or more indexed positions in order to achieve a change in contact state.

Slide switch

Switch, the actuating member of which is a slide which has to be slide to one or more indexed positions in order to achieve a change in contact state.

Operating Characteristics

Actuating force

The force which is required to move the actuator and contact system from the free to the operating position

Free position

The position of the actuator when no external force is applied

Operating Position

The position of the actuator when the contact has change over the state take place

Detent position

The position of the actuator when the system is in stable operating position

Overtravel

Movement of the switch beyond the operating position

Release force

The value to which the applied force must be reduced to allow the mechanism to reset after operation

Total Travel

The complete movement of the actuator

Approvals

Almost all of Saia Burgess switches are tested and approved according to EN 61058-1 resp. IEC 61058-1 and UL 1054.

The corresponding certificates are available on request.

Approval marks, certification marks

ENEC – Mark, the switch fulfils European (EN) Standards. The two digits numbers indicates which certification body has issued the ENEC Certificate.

UL UR-Mark recognized compound mark for the USA

cULus-Mark for Canada and USA

CE Mark, administration mark

The CE Mark is an administrative mark, which often is mistake as a certification mark.

This mark indicates the conformity of a product with the EC Directives and can be affixed themselves by the manufacture. For almost all of Saia-Burgess switches the basis for the EC Declaration is the full compliance with the corresponding standard.

To bear the CE- Mark on the component It is not prescribed. Present is the CE Mark on the smallest packing unit.

Explosionsproof IEC60079-15:1987

The switch must withstand an internal explosion without igniting a surrounding gas mixture.

Resistance to tracking

The resistance to tracking (PTI / CTI values) indicates the maximum voltage which a material withstands a definite quantity of drops of test solution without tracking.

Resistance to head and fire:

The materials pass the glow-wire test level 5 carried out at 850°C

Electrical rating

The maximum permissible electrical load is specified for the respective switch series. Most of Saia Burgess switches are suitable for both resistive and motor loads. The rated current for the motor load is specified in brackets, e.g. 16 (4) A 250 V ac.

Information about ratings for direct current (DC) will be provided on request.

Type of load: ENEC / IEC

Resistive load; circuit for a substantially load with a power factor of not less than 0,9 Marking for example 16A

Inductive load; circuit for either a resistive load, a inductive (motor) load with a power factor not less than 0,6 or a combination of both.

Marking for example 16(4)A

Lamp Loads; circuit for ordinary tungsten filament lamp load

Marking for example 16[2]A

Type of load: UL

HP load; circuit for a motor load with a power factor not less than 0,4

Marking for example _ HP

EMC (Spurious Radiation / Spurious Emission)

EMC requirements are not applicable for manual operated switch and required only for electronic switches resp. electronic components or electronic circuits.

Please your attention, when installed in other products or as a part of an assembly, the EMC characteristics can be affected and the test must be repeated on the end use product.

Ambient temperature

The marking e.g. T 100 means that the switch is approved by the European approval authorities (according to EN 61058-1 resp. IEC 61058-1) for the max. ambient temperature of 100 °C. The marking T 100/55 means, that the terminal side of the switch is suitable for an ambient temperature of 100 °C and the ambient temperature for an actuating element (e.g. the rocker) reduced is of 55 °C.

For **USA** approved switches the ambient temperature is determined by the RTI (Relative Temperature Index) of the materials used. Temperatures are available on request.

Switch Technology

Clearance Distance

The distance in air between conductive parts or between conductive parts and a surface which can be contacted by persons when the switch is installed.

Creepage Distance

The path along the surface of insulating material between conductive parts or between conductive parts and a surface which can be contacted by persons when the switch is installed

Insulation Resistance

The resistance for reinforced insulation shall be not less than 7 MΩ between all live parts connected together and a metal foil covering to a accessible surface

Functions:

On-off function switch, or momentary

Change over

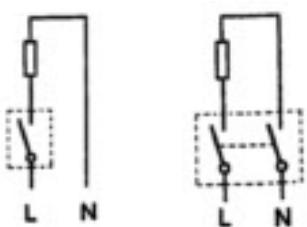

On-off function in two directions with or without zero position, or momentary Multiple function On – step- off function e.g I – II – 0 positions, or momentary

Pole

Part of the switch which exclusively is assigned to an electrically separate conducting path of the switch.

A single-pole switch has only one pole (two terminals)

A double-pole switch has two-poles (four terminals)

Number of cycles:

According to EN 61058-1 normally cycles 10.000 (1E4), frequent operation 50.000 cycles (5E4)

According to UL 1054 normally 6.000 cycles

Contact Materials

Terminals

Copper or and copper alloy

Contact-point

Silver or silver alloy Ag Ni 90/10 are primary contact materials used in Saia-Burgess manual operated switches

Gold-plated contacts on request

Contact disconnection

The most of the switches have a contact disconnection of ≥ 3 mm.

Switches with a contact disconnection of < 3 mm are marked by the sign μ .

Terminals

Tab terminal

Solder terminal

PCB terminal

bush- terminal

Screw less terminal

Switch Actuation / Design

Customer specified on request.

Haptic

Haptic perception contains all aspects of the touch under use of the hands. The surface compositions of the activity elements as well as the haptic re-registration of the contact systems are included. Various sorts of surfaces and switch force characteristics are available.

Switching easily possible with feeling means: Comfortable switch.

Optic

Surfaces and design are the essential distinctive marks of the applications today. Based on standard switches individual designs can be made come true by different actuators. Surfaces can be represented by structures or also painted surfaces.

Signal indicator

The illumination of a switch is a component to indicate the circuit state visually, for which we used glow-lamps or LED's .

There are the rockers in completely transparently or with one special shining window. For this it is important that the lateral shining effect also makes this one a side view possible.

Glow lamp or LED been used for illumination. Customer specified on request. The color is eligible for office according to customer wish.

Environmental Protection

Protection Classifications (IP- Code)

The first figure is the protection against solids

The second figure is the protection against water

For example

IP40

Adequate protection against solids such as probing finger and small wires $> 1\text{mm}$. Liquids however can again access and, unless externally protection, the switches should be mounted in dry or well-sheltered positions

IP54

Good protection against solid foreign bodies, including dust and water splashing against the enclosure from any direction. Switches may be used out of doors if sheltered from the worst of the elements or on factory machines subjected to normal washing down procedures

IP65

Complete protection against solids, including dust and against low pressure jets of water from all directions

IP67

Complete protection against solids including dust and against immersion in water at a specific pressure for a specified time.

Please your attention that information concerning the IP – Code for these products are, if not otherwise specified, only for the actuating side. The sealing between switch and the end use application must be tested by the customer.

EU Directive 2002/95/EC (RoHS)

All switches are free of banned substances

Possible combination / Pre-wiring**Switch drawing**

All drawings in this catalogue are third angle projection. All dimensions in this catalogue are nominal, except where specifically shown.

Health & Safety

Saia-Burgess has ensured, so far as it is reasonably practicable, that their products as described in this catalogue or in other current company publications, or as specified on Saia-Burgess installation drawings. They have been so designed and constructed as to be safe and without risk to health when installed by suitably qualified personnel in accordance with relevant legislation, codes of practice, regulations (including IEE Wiring Regulations), the installation recommendations offered by the company and the accepted rules of the art. Their usage should be confined within the ratings limitations and parameters of application indicated in this catalogue and elsewhere.

Please contact us should you need additional information or guidance.

Service Recommendations**Maintenance**

Saia-Burgess switches are not user-maintainable but they should be kept in a reasonably clean, paint-free condition, especially in the actuator area. Regular checks should be made on mounting security and on the actuating medium to switch actuator relationship.

Lubrication or the use of aqueous or chemical cleaning fluids is not recommended.

Installation Recommendations

The user is responsible for the proper installation under consideration of the respectively valid norms

Safety consideration

Installation should only be carried out by competent personnel

General note

All data specified in this catalogue are not binding and we reserve the right to alter a product in accordance with technical improvements without notice. Binding data are available after clarification of all relevant conditions on request.

Specifications

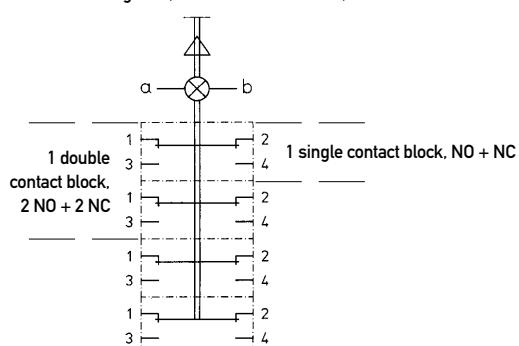

Mechanism	Bi-functional – momentary or latching
Actuating force	Approximately 2.5N – 1 contact block
Mounting	Central fixing with metal lock nut
Protection	IP40, IP65, IP67
Bezel material	Thermoplastic or anodized aluminium alloy
Lens material	Polycarbonate – engravable
Illumination	T1 1/4 midget grooved lamps – incandescent lamps , LEDs, multi LEDs 60 V, 1.2W maximum Lamp contact "b" = cathode (-) Appropriate safety regulations should be respected when using the indicator light.
Temperature range °C	-25°C to +85°C
Mechanical life	10 ⁶ cycles
Contact block	Slide-on assembly by the user with locking mechanism
Contact block housing	Self-extinguishing duroplastic (UL 94 plus V0)
Terminal material	Silver alloy with 0.2 µm silver plating, 0.4 µm gold plating
Contact resistance	<30 mOhm
Number of contact blocks	User configurable NO or NC types up to a maximum of 2 double contact blocks
Terminals	Solder – suitable for wire diameter 1 x 1.00 mm ² (braided), 2 x 0.75 mm (stranded) Faston – 2.8 mm x 0.5 mm
Vibration resistance	1.5 mm pp amplitude at 55 Hz

Bi-functional selection

All latching switches in the range incorporate a simple selector mechanism for modifying the function of the switch. This function is not available with momentary switches.

**Application:**

When the switch is in the off position the selector mechanism can be moved to the right to obtain a momentary function, or to the left to return to a latching function.

Specifications

Mechanism	Bi-functional – momentary or latching
Actuating force	Approximately 2.5N – 1 contact block
Mounting	Central fixing with metal lock nut
Protection	IP40, IP65
Bezel material	Thermoplastic or anodized aluminium alloy
Lens material	Polycarbonate – engravable
Illumination	T13/4 midget grooved lamps – incandescent lamps , LEDs, multi LEDs 60 V, 1.2 W maximum Lamp contact "a" = cathode (-) Appropriate safety regulations should be respected when using the indicator light.
Temperature range °C	-30°C to +80°C
Mechanical life	10 ⁶ cycles
Contact block (blocks)	Supplied fitted
Contact block housing	Self-extinguishing duroplastic (UL 94 V0)
Terminal material	Silver alloy with 0.2 µm silver plating plus 0.4 µm gold plating
Contact resistance	< 30mOhm
Number of contact blocks	1 NO + 1 NC per contact block, up to a maximum of 3 contact blocks per switch
Terminals	Patented flexible solder - suitable for wire diameter 2 × 1.00 mm ² (braided), 4 × 0.75 mm (stranded)
Vibration resistance	1.5 mm pp amplitude at 55 Hz

Dimensions Plastic bezel and lens heights in mm (switch off position)

Aluminium bezel Ø 25 and lens heights in mm (switch off position)

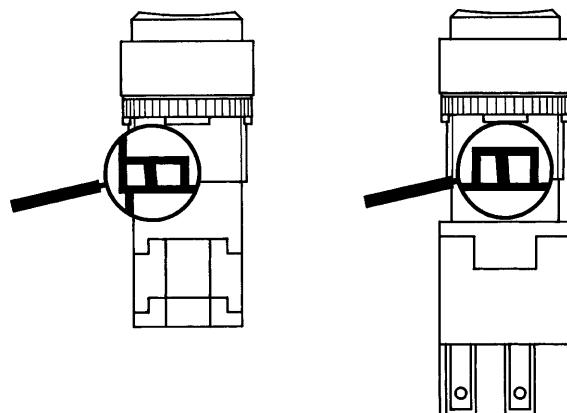

Front panel thickness	plastic bezel	1.0 mm to 5.5 mm
		aluminium bezel 1.0 mm to 5.0 mm countersunk mounting 2.0 mm to 20.0 mm

Bi-functional selection

All latching switches in the range incorporate a simple selector mechanism for modifying the function of the switch.

This function is not available with momentary or interlocking switches.

Application:

When the switch is in the off position the selector mechanism can be moved to the right to obtain a momentary function, or to the left to return to a latching function.

TP82MDOA30	Ø 22.5	Momentary	Non-illuminated Natural Aluminium	2.8 × 0.5 Faston	230 VAC 6 A

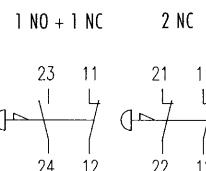

Specifications

Mechanism	Momentary positive action with wiping contacts
Contact gap	>3 mm
Actuating force	Approximately 6.0N
Mounting	Central fixing with metal lock nut
Protection	IP67
Housing and actuator material	Anodised aluminium or stainless steel (upon request) Non-illuminated
Temperature range °C	-25°C to +55°C
Contact block	Supplied fitted
Contact block housing	Thermoplastic
Terminal material	Silver nickel with 0.4 µm gold plating
Contact resistance	<30mOhm
Number of contact blocks	1 NO + 1 NC or 2 NC or 2 NO (independent circuits)
Terminals	Faston - 2.8 mm × 0.5 mm, to DIN 46247

Specifications

Mechanism	Piezo electronic, without auxilliary energy
Actuating force	5N maximum at an actuating speed 500 to 1500 mm/s
Closing impulse duration	10 to 1000 m/s - dependent on force and speed of actuation
Mounting	Central fixing from the rear with metal lock nut
Protection	IP68 (after installation)
Housing and actuator material	Anodised aluminium and stainless steel
Illumination	LED (18mm switch non-illuminated only)
Temperature range °C	-40°C to +105°C (non-illuminated), -40°C to +85°C (illuminated)
Life expectancy	>15 × 10 ⁶ cycles
Contact resistance	<10 Ohm (on)
Insulation resistance	>5MΩ (off)
Terminals	Prewired: 2.8mm × 0.8mm faston; Molex-style 3.5 & 6 pin; AMP-style 4 pin
Power consumption (illuminated types)	red or green: 12V IP = 40 mA 24V IF = 20 mA red/green: 12V IP = 2 × 20 mA 24V IF = 2 × 20 mA

Technical information

The piezo sensor converts pressure into voltage signals. These analogue voltage signals are then processed within the switch to form switching signals, using field effect transistors (FET).

Due to the internal resistor, the circuit state is dependent upon actuating force and speed, means of operation and the discharge time of the R-C system. Standard digital or relay technology can be employed to create individual timed delay, flip-flop and power amplification circuits.

The circuit state diagram shows the approximate relationship between the force/time curve to the voltage circuit state:

TI51VALA4CN	Ø 16.2	Visual	18 × 24	IP40
TI52VFSF4CN	Ø 22.5	Visual	Ø 25	IP65

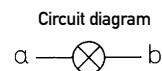

Specifications

Mounting	Central fixing with metal lock nut
Protection	IP40, IP65
Bezel material	Thermoplastic or anodized aluminium alloy
Lens material	Polycarbonate – engravable
Illumination	T1 ½ midget grooved lamps – incandescent lamps . LEDs, multi LEDs 60 V, 1.2 W maximum Lamp contact a = anode (+), b = cathode (-) Appropriate safety regulations should be respected when using the indicator light.
Temperature range °C	-25°C to +85°C
Terminal material	Silver alloy with 2 µm silver plating, 4 µm gold plating
Terminals	Patented flexible solder - suitable for wire diameter 2 x 1.00 mm ² (braided), 4 x 0.75 mm (stranded)
Vibration resistance	1.5 mm pp amplitude at 55 Hz

Specifications

Mechanism	Momentary positive action with wiping contacts
Contact gap	>3 mm
Actuating force	Approximately 25 N
Mounting	Central fixing with metal lock nut (E switch) and Anti-rotation device on key (reset switch)
Protection	IP67
Bezel material	Thermoplastic or nickel-plated brass
Lens material	Polycarbonate
Illumination	Non-illuminated
Temperature range °C	-25°C to +55°C
Contact block	Supplied fitted
Contact block housing	Thermoplastic
Terminal material	Silver nickel with 0.4 µm gold plating
Contact resistance	<30 mOhm
Number of contact blocks	1 NO + 1 NC or 2 NC – independent circuits
Terminals	Faston - 2.8 mm × 0.5 mm, to DIN 46247

Dimensions Emergency stop switches according to EN 418 IP66/IP67

Specifications

Mechanism	Key actuated
Mounting	Central fixing with metal lock nut
Protection	IP40 or IP65
Bezel material	Thermoplastic or anodized aluminium alloy
Temperature range °C	-25°C to +85°C
Mechanical life	10 ⁶ cycles
Contact block	Slide-on assembly by the user
Contact block housing	Self-extinguishing duroplastic (UL 94 V0)
Terminal material	Silver alloy with 0.2 µm silver plating plus, 0.4 µm gold plating
Contact resistance	<30 mOhm
Number of contact blocks	User configurable NO or NC types up to a maximum of 2 double contact blocks
Terminals	Patented flexible solder – suitable for wire diameter 1 × 1.00 mm ² (braided), 2 × 0.75 mm (stranded) Faston - 2.8mm × 0.5mm
Vibration resistance	1.5 mm pp amplitude at 55 Hz

Cylinder locks

KABA MICRO

Compact format

Key code EB 0001 (standard)

Key codes EB 0002 - EB 0020 (upon request)

Over 10'000 different key code variations

Key lock systems with master keys and central locks

2 keys per key switch (additional keys on order)

Destruction of the key or lock must be expected if the level 50 Ncm is exceeded.

Recommended maximum electrical ratings

Specifications

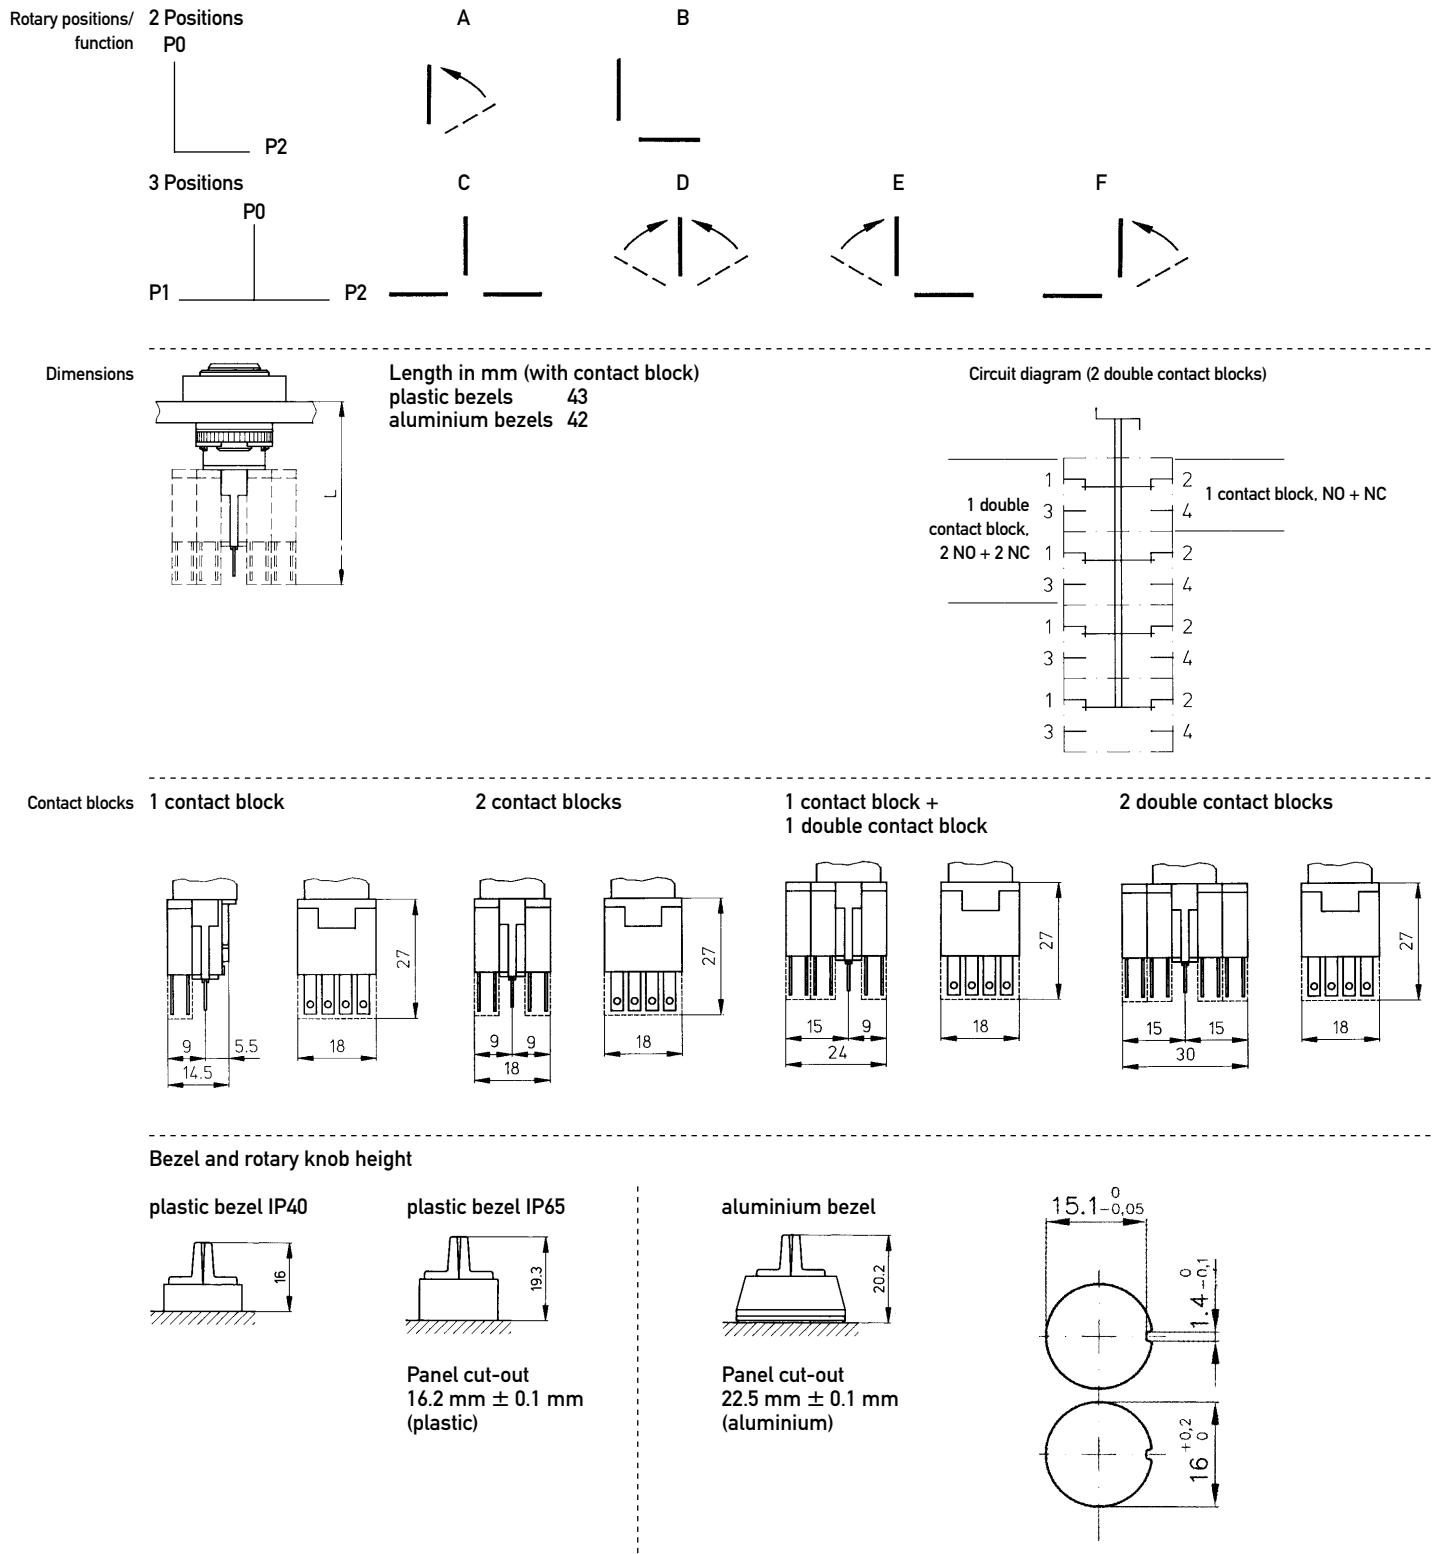

Mechanism	Knob actuated
Mounting	Central fixing with metal lock nut
Protection	IP40 or IP65
Bezel material	Thermoplastic or anodized aluminium alloy
Temperature range °C	-25°C to +85°C
Mechanical life	10 ⁶ cycles
Contact block	Slide-on assembly by the user
Contact block housing	Self-extinguishing duroplastic (UL 94 V0)
Terminal material	Silver alloy with 0.2 µm silver plating, 0.4 µm gold plating
Contact resistance	<30 mOhm
Number of contact blocks	User configurable NO or NC types up to a maximum of 2 double contact blocks
Terminals	Patented flexible solder – suitable for wire diameter 1 × 1.00 mm ² (braided), 2 × 0.75 mm (stranded) Faston - 2.8mm × 0.5mm
Vibration resistance	1.5 mm pp amplitude at 55 Hz

	E	Ø 25 mm aluminium									

The rotary switch cannot be installed without a bezel. The IP40 bezels are interchangeable before installation.

Once an IP65 bezel has been assembled it cannot be removed.

Contact blocks will be supplied unassembled.

Accessories

Contact blocks

TH593566020	NO	2.8 × 0.5mm	Contact blocks for TP2, TK2, TR2	gold plated
TH593560020	NO	Insulated faston		
TH593561020	NO	Solder		
TH593566050	NC	2.8 × 0.5mm		
TH593560050	NC	Insulated faston		
TH593561050	NC	Solder		
TH593566000	1 NO + 1 NC	2.8 × 0.5mm		
TH593560000	1 NO + 1 NC	Insulated faston		
TH593561000	1 NO + 1 NC	Solder		
TH593569000	2 NO + 2 NC	2.8 × 0.5mm		
TH593563000	2 NO + 2 NC	Insulated faston		
TH593564000	2 NO + 2 NC	Solder		

TH493500000		Contact blocks for TP4, TP5	gold plated
TH493520000	End plate for TP4, TP5		
TH493521000	(for 1 contact block)	Pairs of screws for TP4, TP5	
TH493522000	(for 2 contact blocks)		
TH493523000	(for 3 contact blocks)		

Mounting nuts (whole range)

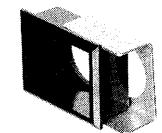

TH593545000	Fixation nuts M16 × 1 (TP2, TP5, TP4)
TH593547000	Fixation nuts M22 × 1 flat (TP2, TP5, TP4)
TH493547000	Fixation nuts M22 × 1 large (TP5, TP4)

Countersunk mounting bezel sets (TP2, TP5, TI2, TI5)

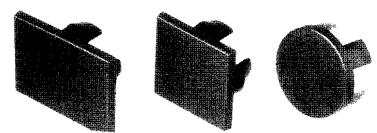

For concealed versions only

TH593072000	for Switches 18 × 24 mm, IP40
TH593082000	for Switches 18 × 24 mm, IP67
TH593073000	for Switches 18 × 18 mm, IP40
TH593083000	for Switches 18 × 18 mm, IP67

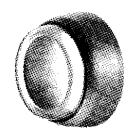

Panel plugs (TP2, TP5)

TH493000000	18 × 24, IP40
TH493002000	18 × 18, IP40
TH493004000	Ø 18, IP40

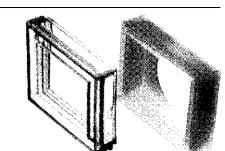

Protecting covers (TP2, TP5, TP4)

TH493033000	Sealing ring D26, alu natural, silicon cap, IP65 (TP5, TP2, TI5, TI2 22.5 mm)
TH493033001	Sealing ring D25, alu natural, strong pebax cap. IP65 (TP5, TP2, TI5, TI2 22.5 mm)

TH493031000	Splashproof protection (transp. plast. upper part only) for exposed bezel 18 × 24 (TP2, TP5, TP4)
-------------	---

TH493010000	Guard bracket, for switches 18 × 24, anodised aluminium (wide sides raised)
-------------	---

TH493011000	Guard bracket, for switches 18 × 18, anodised aluminium (two sides raised)
-------------	--

Accessories

TH493012000 Guard bracket, for switches Ø 18, anodised aluminium

TH493020000 Guard bracket, for switches 18 × 24, black plastic (all sides raised)

TH593032000 Protecting cover with transparent plastic lid, 18 × 18

Anti-rotation devices (TK2, TR2, TE8)

TH053205000 for panel cut-out 16.2 mm (TK2, TR2)

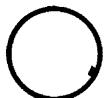

TH493532000 for panel cut-out 22.5 mm (TK2, TR2)

TH593080000 Adapter set, key- and rotary switches (TK2, TR2)

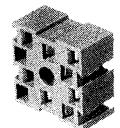

TH060661000 panel cut-out 16.2 mm (TE8)

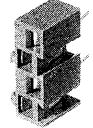

Plug in socket (TP2)

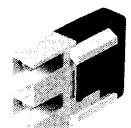

TH593578000 for 1 contact block TP2 with indicator terminals

TH593568000 for 2 contact blocks TP2 with indicator terminals

TH593582000 for 1 contact block TP2 without indicator terminals

TH593584000 Diode carrier with 2 diodes 1N4007, faston connection without insulation

Accessories

Extra and spare keys (TK2)

TH493049001 to TH493049020 (KABA MICRO, EB0001 – EB0020)

Faston Connectors (TP2, TK2, TR2, TP8)

TH593571000 Faston pin, 2.8 × 0.5 mm, insulated, for wires 0.8 – 1.4 mm² (TP2, TK2, TR2)

TH593572000 Faston pin, 2.8 × 0.5 mm, for wires 0.5 – 1.0 mm² (TP2, TK2, TR2, TP8)

TH593573000 Faston pin, 2.8 × 0.5 mm, for faston casings, for wires 0.3 – 0.6 mm² (TP2, TK2, TR2)

TH593574000 Sleeve and casing for th25 contact block 1 NO + 1 NC (TP2, TK2, TR2)

TH593575000 Sleeve and casing for th25 lamp terminals (TP2, TK2, TR2)

Accessories

Miscellaneous (Lamp extractor, metal and plastic spanners)

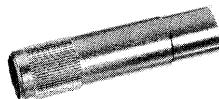

TH492000000 Lamp extractor

TH492005000 Lens extractor

TH492100000 Metal box-spanner, fixation nut M16 × 1

TH492105000 Metal box-spanner, fixation nut M22 × 1

TH493510000 Insulated terminal cover, for terminal wires

Lamps (TP2, TP5, TI2, TI5)

Incandescent lamps

Terminology: Panel Mounted

Operating Characteristics

Actuating Force/Operating Force

The force required to move the actuator from the free to the operating position.

Free Position

The position of the actuator when no external force is applied.

Movement Differential (Hysteresis)

The distance between operating and release position.

Operating Position

The position of the actuator when contact change-over takes place.

Overtravel

Movement of the switch actuator beyond the operating position.

Pre-travel

Movement of the switch actuator between free and operating position.

Post release travel

Movement of the switch actuator between release and free position.

Release Force

The value to which the applied force must be reduced to allow the mechanism to reset after operation.

Release Position

The position of the actuator when the switch mechanism resets.

Total Travel

The sum of pre-travel and overtravel.

Switch Technology

Butt Contacts – contacts that make at one point and maintain their initial relationship without further movement until they are opened.

Clearance Distance – the distance in air between current carrying parts of opposite polarity or between any current carrying part and an earthed-(grounded) metal plate to which the switch is attached.

Creepage Distance – the path along the surface of insulating material between current carrying parts of opposite polarity or between any current carrying part and an earthed (grounded) metal plate to which the switch is attached.

Insulation Resistance – resistance as measured between the normally closed terminals, or between all terminals connected together and a metal plate to which the switch is mounted. In dry conditions the value would be expected to be greater than $5M\Omega$.

Single Throw – a switch which provides an ON-OFF or OFF-ON function but does not change over from one conductor to another. Such switches

are usually referred to as being «normally-closed only» or «normally-open only».

Switching Cycle – one complete switching operating from free position into overtravel and back through release position to free position.

Switch Resistance – a total resistance offered by a switch in a circuit, as measured from terminal through mating contacts, to terminal.

Transit Time – the time taken by the moving contact in a snap-action mechanism to move from one stable position to another.

Wiping Contact – a moving contact mechanically arranged to slide across the fixed contact during pre-travel and overtravel.

Electrical Ratings

Electrical ratings given in the catalogue
are ratings according to UL1054, CSA22.55 or
IEC61058-1.

Where these are not available a general rating is given based upon in-house laboratory testing.

The ratings tables should be considered as safe working maximum for most applications. However, switch performance is influenced by a variety of factors, including:

- Frequency of operation
- Type of load
- Amount of travel used
- Temperature
- Humidity

Please do not hesitate to contact Saia-Burgess about your specific application.

Approvals

CSA mark. Switch meets CSA's safety standards

UL Recognized Component Mark for Canada and the United States

ENEC Mark. Switch fulfills European EN standards. The two digit number indicates which certification body has issued the ENEC Certificate

CCEE Mark. Switch fulfills standard GB 15092.1-94

Switch Life

a. Electrical Life – the electrical life data contained in this catalogue is based on laboratory controlled tests. In practice, frequency and speed of operation, type of load, suppression, actuator travel used, ambient humidity and temperature and other environmental conditions can have a major effect on switch life.

Individual assessments for specific applications are possible and can be undertaken by Saia-Burgess on request.

Please ask Saia-Burgess if you would like an assessment for your specific application.

b. Mechanical Life – the figures quoted relate to the number of switching cycles made without an electrical load.

Switch Drawings

All drawings in this catalogue are third angle projection.

All dimensions in this catalogue are nominal, except where specifically shown.

Application Technology

Shock and Vibration

If switches are likely to be subjected to shock or vibration, select models with the highest available actuating force.

Saia-Burgess switches feature low mass mechanisms which are inherently resistant to shock and vibration.

If possible, the switches should be mounted so that the line of acceleration is at right angles to the travel of the plunger. The maximum available overtravel should be used.

Direct Current

Direct current (DC) ratings where shown should not be exceeded if destructive arcing and contact welding are to be avoided.

Some form of arc suppression is recommended when switches are used in DC circuits containing inductive devices wired in series with the switch and the supply.

Lamp Loads

Because of the very high inrush currents associated with incandescent lamps, applications should be subject to individual assessment.

Capacitive Loads (including fluorescent lamps)

These can generate very high peak currents which can cause contact welding. Applications should be subject to individual assessment.

Inductive Loads

The general ratings tables included in this catalogue provide data for switches used to control inductive circuits at a power factor of 0.5. (EN 0.6; UL 0,7 means HP-Rating 0,5)

Contact Materials

Silver and silver alloys (AgNi 10, AgCdO10) are the primary contact materials used in Saia-Burgess switches.

The ratings tables shown refer to switches with silver/silver alloy contacts.

Gold contacts should be specified when switches are to be used in low voltage control or logic circuits, especially when long periods of inactivity are expected or when atmospheres with a high sulphur content may be encountered.

Typically they should be considered for voltages below 12 volts and currents less than 100mA. Gold contacts are generally available in two forms; gold plated silver alloy contacts, which can also be used at higher currents. Gold alloy cross-point contacts, which are only suitable for switching low currents.

Switch Actuation

Direct Operation

Actuating plungers should be operated in the direction of their axis. Where this is not possible the use of actuating levers is recommended. For direct actuation the attack angle should not exceed 30°.

Actuating Levers

Various lever types are available for use with Saia-Burgess switches. They are generally stainless steel.

If roller or cam-follower levers are approached in the reverse direction, care must be taken to ensure that the angle of approach is small enough not to jam the lever.

Actuation by Cams

Cam-follower levers are particularly well suited for use with plastic actuating cams.

Abrupt actuation or release of switch actuators shortens the life of the switches.

For this reason cam should preferably provide a continuous movement. Ideally they should be of cycloidal form.

Environmental Protection

Protection Classifications

The protection classes of Saia-Burgess switches are in accordance with IEC 529 and are covered by just four codes.

IP40

Adequate protection against solids such as probing fingers and small wires >1mm. Liquids however can gain access and, unless externally protected, the switches should be mounted in dry or well-sheltered positions.

IP54

Good protection against solid foreign bodies, including dust and water splashing against the enclosure from any direction.

Switches may be used out of doors if sheltered from the worst of the elements or on factory machines subjected to normal washing down procedures.

IP65

Complete protection against solids, including dust, and against low pressure jets of water from all directions.

IP67

Complete protection against solids including dust and against immersion in water at a specific pressure for a specified time.

We reserve this code for switches which are factory sealed and tested.

Switches should not be immersed in any liquid.

Working Temperatures

For details of the working temperatures applicable to individual types, refer to the appropriate specification sheet. Special versions suitable for temperatures outside these ranges may be possible. Please contact us for information.

All quoted temperatures assume stable operation. They do not imply an ability to withstand excessive cycling within the range.

Health & Safety

Saia-Burgess has ensured, so far as it is reasonably practicable, that their products as described in this catalogue or in other current company publications, or as specified on Saia-Burgess installation drawings. They have been so designed and constructed as to be safe and without risk to health when installed by suitably qualified personnel in accordance with relevant legislation, codes of practice, regulations (including IEE Wiring Regulations), the installation recommendations offered by the company and the accepted rules of the art. Their usage should be confined within the ratings limitations and parameters of-application indicated in this catalogue and elsewhere.

Please contact us should you need additional information or guidance.

Service Recommendations

Maintenance

Saia-Burgess switches are not user-maintainable but they should be kept in a reasonably clean, paint-free condition, especially in the actuator area. Regular checks should be made on mounting security and on the actuating medium to switch actuator relationship.

Lubrication or the use of aqueous or chemical cleaning fluids is not recommended.

Saia-Burgess recommends that the actuating medium should drive the switch into at least 50% of the available overtravel.

All ratings tables shown in this catalogue are based on the use of all the available overtravel.

Mounting

Side mounting switches should be mounted on smooth, firm, flat surfaces using the recommended screw size. Avoid over tightening the screws. For added security, they should be locked using epoxy resin. Do not attempt to enlarge switch mounting holes and avoid over stressing the switch. Use insulating material between the switch and metallic plates to increase clearance on switches with open terminals.

Connections

When soldering, over-heating of the switch insulation must be avoided. In certain circumstances, it may be advisable to use a heat shunt. For optimum mechanical strength, the conductor should be wrapped round the tip of the terminal taking care to avoid loose strands of wire.

The soldering iron tip should be applied to the end of the terminal while simultaneously applying solder. Remove the iron as soon as the solder has wetted the conductor and terminal end. A-soldering iron tip temperature of 350°C (260°C/5 seconds for PCB Terminals) applied for a maximum of 2-3 seconds should be adequate.

Installation Recommendations

The following notes are intended merely to stress the most important and general aspects of good switch installation procedure and to provide some helpful additional information.

Safety Consideration

Installation should only be carried out by competent personnel.

Switch Positioning and Operation

Pre-loading of the switch actuator must be avoided. The actuating medium must be able to operate the switch through the operating position into overtravel and then to retract far enough to allow the switch to regain its free position.
