

# Automotive Market Applications & Transportation Industry

Standex-Meder Electronics dynamic capabilities and solutions provide reed switches, relays, and sensors, magnetics, and fluid level sensing products throughout the transportation industry. Think of anything that turns on/off, opens/closes, requires power transfer, lighting, starting, measuring, or detecting – and we can play a role within that application. From read outs on the dashboard to measurement of coolant, brake, windshield, water in fuel, tire pressure, and emissions – our components perform within vital processes within automobiles, heavy-duty trucks, recreational vehicles, airplanes, trains, motorcycles, eCars, eBikes, boats, and more.
